DRAFT Hampton East Urban Forest Precinct Plan 2023

Bayside CITY COUNCIL

Cover page: A W Oliver Reserve

Inside cover page: Basterfield Park

Acknowledgement of Traditional Owners

Bayside City Council acknowledges the Bunurong people of the Kulin Nation as the traditional custodians of the lands and waterways in the area now known as Bayside, and pays respect to their elders past, present, and emerging, as well as to all First Nations' communities who significantly contribute to the life of the area.

Contents Page – Hampton East

Introduction to the Precinct Plans

In December 2019, Bayside City Council declared a climate emergency and has since prepared a *Climate Emergency Action Plan 2020 – 2025*. Climate change is real and without respecting our environment or changing the way we behave as a society, there will be even greater impacts than those already experienced. Expanding Bayside's urban forest is one way that we can help cool the urban environment in which our residents live.

As an action listed in the *Climate Emergency Action Plan*, the development of the Bayside *Urban Forest Strategy* was undertaken and ultimately adopted at its February 2022 Council Meeting. In addition, Bayside City Council has endorsed *Living Melbourne: Our Metropolitan Urban Forest* in 2019, which sets out regional targets for tree and vegetation canopy cover to be reached by 2030, 2040 and 2050.

The Vision of the Bayside *Urban Forest Strategy* is:

"Bayside's urban forest will protect and restore ecological systems with special concern for biological diversity and natural processes which will create a cooler and greener Bayside with enhanced amenity and character where people are connected to nature."

The overarching goal of the Bayside Urban Forest Strategy is to increase the urban tree canopy cover from the current 16.01% to 30% by 2040, and to continue this increase into the future.

The Bayside *Urban Forest Strategy* identifies a range of actions to be undertaken over the next four years. A key focus is the preparation of Precinct Plans for each suburb in Bayside to guide tree planting and greening at a local level. Precinct Plans are subsidiary documents to the Bayside *Urban Forest Strategy* and form a key component of the strategy's implementation. Bayside is made up of 9 suburbs and the Urban Forest Precinct Plans will be prepared for each. They will provide tailored direction for increasing canopy cover and urban forest outcomes into the future.

Tree and vegetation (understorey) cover data referenced in these Precinct Plans has been utilised from the Victorian Government's aerial imagery and has been analysed by Council's GIS (Geographical Information System) to determine an approximate level of tree and vegetation cover per suburb.

What is an urban forest?

The urban forest encompasses all the trees, shrubs, grasslands, other vegetation and the soil and water that support them – within Bayside, on both public and private land. The urban forest incorporates vegetation in streets, parks, gardens, plazas, campuses, river and creek embankments, wetlands, railway corridors, community gardens, home gardens, green walls, balconies, and roofs.[1] Fauna is an important component too, with complex interrelations between animals and plants helping to maintain the urban forest.

Bayside's urban forest is made up of native, indigenous and exotic trees, shrubs, grasslands and other vegetation, growing on public and private land, and the soil and groundwater that support them. This includes vegetation in parks, reserves, private gardens, along railways, waterways, main roads, and local streets, and on other green infrastructure such as green walls and roofs. The urban forest provides habitat to a wide range of fauna.

The overarching goal of the Urban Forest Strategy in Bayside is to increase the urban tree canopy cover from the current 16.01% to 30% by 2040, and to continue this increase into the future.

The Urban Forest Strategy

Principles:	Strategies:
1. Increase	1.1 Consider the individual needs of Bayside's suburbs and ensure that the approach to increasing canopy cover and urban forest outcomes is tailored to the conditions of each area. 1.2 Reframe Council's approach to major capital and infrastructure renewal projects as opportunities to increase urban forest outcomes. 1.3 Through the Bayside Planning Scheme, require development to provide increases to the number of canopy trees provided.
2. Healthier ecosystems	2.1 Increase the tree and vegetation canopy cover that is of a diverse range of species across Bayside. 2.2 Ensure humans and wildlife can simultaneously and safely access densely vegetated areas, streets and reserves.
3. Monitor	3.1 Improve, implement and facilitate Council processes and procedures to assist the monitoring of the urban forest
4. Maintain	4.1 Ensure the tree removal process is transparent and equitable 4.2 Reframe our planning and policy framework to give greater priority to existing trees and vegetation when siting new development and ensuring the longevity of any new trees or vegetation by ensuring it is appropriately sited nearby surrounding hard surfaces or infrastructure. 4.3 Enhance Council's ability to retain existing trees on private property through increased regulation of tree removal. 4.4 Support the maintenance and retention of trees on public land.
5. Learn and Celebrate	5.1 Increase Council's capacity to provide advice and build community sentiment to tree planting in Bayside. 5.2 Continue to build upon Council's green image and utilise this platform to advocate and partner with key stakeholders to provide greener outcomes across Bayside, metropolitan Melbourne and Victoria. 5.3 Leverage from the strengths of our network of volunteers, community groups, State Government departments, neighbouring local governments, academics and professionals to support the delivery of community education, information sharing and creating partnerships.

Key Issues

Environmental challenges

Impact of climate change: All trees, including trees on private property, are being affected by climate change. It is important that Council continues to encourage residents to plant climate-resilient trees and vegetation on their property and nature strips. To support this, the provision of readily accessible information and useful tips on how to best plant these types of trees and vegetation will be of great value. Council will also ensure its species palette for streets and parks include the use of more climate-resilient trees and vegetation.

Tree health, age, Useful Life Expectancy, and species diversity: *The Bayside Urban Forest Strategy* defines key issues across Bayside's urban forest, including climate change, insufficient growth space and natural characteristics (disease, insects, etc.) being significant contributing factors to the health and sustainability of tree coverage across Bayside. This Precinct Plan identifies locations of trees that are in poor health, are reaching senescence and has low useful life expectancy so that appropriate action can be taken in due time.

Tree survival rate: A high proportion of street and park trees that have been planted have struggled to survive either during or after their initial period of maintenance (first 2 years). Expanding the urban forest and increasing tree canopy coverage will be challenging, especially if high tree attrition continues to occur.

Developmental challenges

Trees on private property: Trees on private property make up a significant proportion of Bayside's urban forest. The removal of trees on private property is a significant and challenging issue to address as the management of private trees, to some extent, falls into the hands of individual property owners. Partnering with the private owners and undertaking a precinct-based approach to the protection, retention and enhancement of the urban forest will allow Council to consider the local opportunities for vegetation and tree plantings, process improvements and other locally specific issues.

Planning permits involving vegetation removal: There are several mechanisms currently in place within the Bayside Planning Scheme that seek to protect vegetation in certain areas of Bayside and require a planning permit to be granted for tree or vegetation removal. These mechanisms include but are not limited to the Vegetation Protection Overlay (VPO), Significant Landscape Overlay (SLO), Heritage Overlay (HO) and Erosion Management Overlay (EMO).

Surrounding infrastructure: Street trees are located alongside public and private assets that include footpaths, roads, fences, overhead powerlines and underground services. This pressure is similarly felt on private property for medium and high density developments where there are competing uses and infrastructure to be sited. While there are management and design techniques that can mitigate most of these issues, it is not always easy, particularly with established trees. Established trees have larger roots that can impact footpaths and roads, creating potential hazards that need to be fixed.

Social challenges

Older people, children, and people with disabilities: More vulnerable members of the community include older people, young children and people with disabilities and their carers. While trees bring many benefits, they can also create challenges. Maintenance of trees can be challenging for older people or people living with disabilities. Particularly large trees that overhang private property or within the property that can become hazardous through debris that create trip and slip risks. Aging and/or disability can prevent some residents from being able to manage the debris from trees, requiring the use of private gardening services.

Bayside Council's *Disability Action Plan 2021-2025* states that over 14,000 people living in Bayside have a disability and over 4,000 people need assistance in their day-to-day lives. This assistance is required because of disability, long-term health conditions or old age.

Safety: There are a number of elements that contribute to people feeling unsafe, including low visibility and lack of passive surveillance from nearby residents and/or other groups. Within streets, Council plants and maintains trees to ensure there is no foliage to block sight lines. Trees can contribute to this problem if not managed correctly as they have the potential to block visibility from the street.

What will the Precinct Plans achieve?

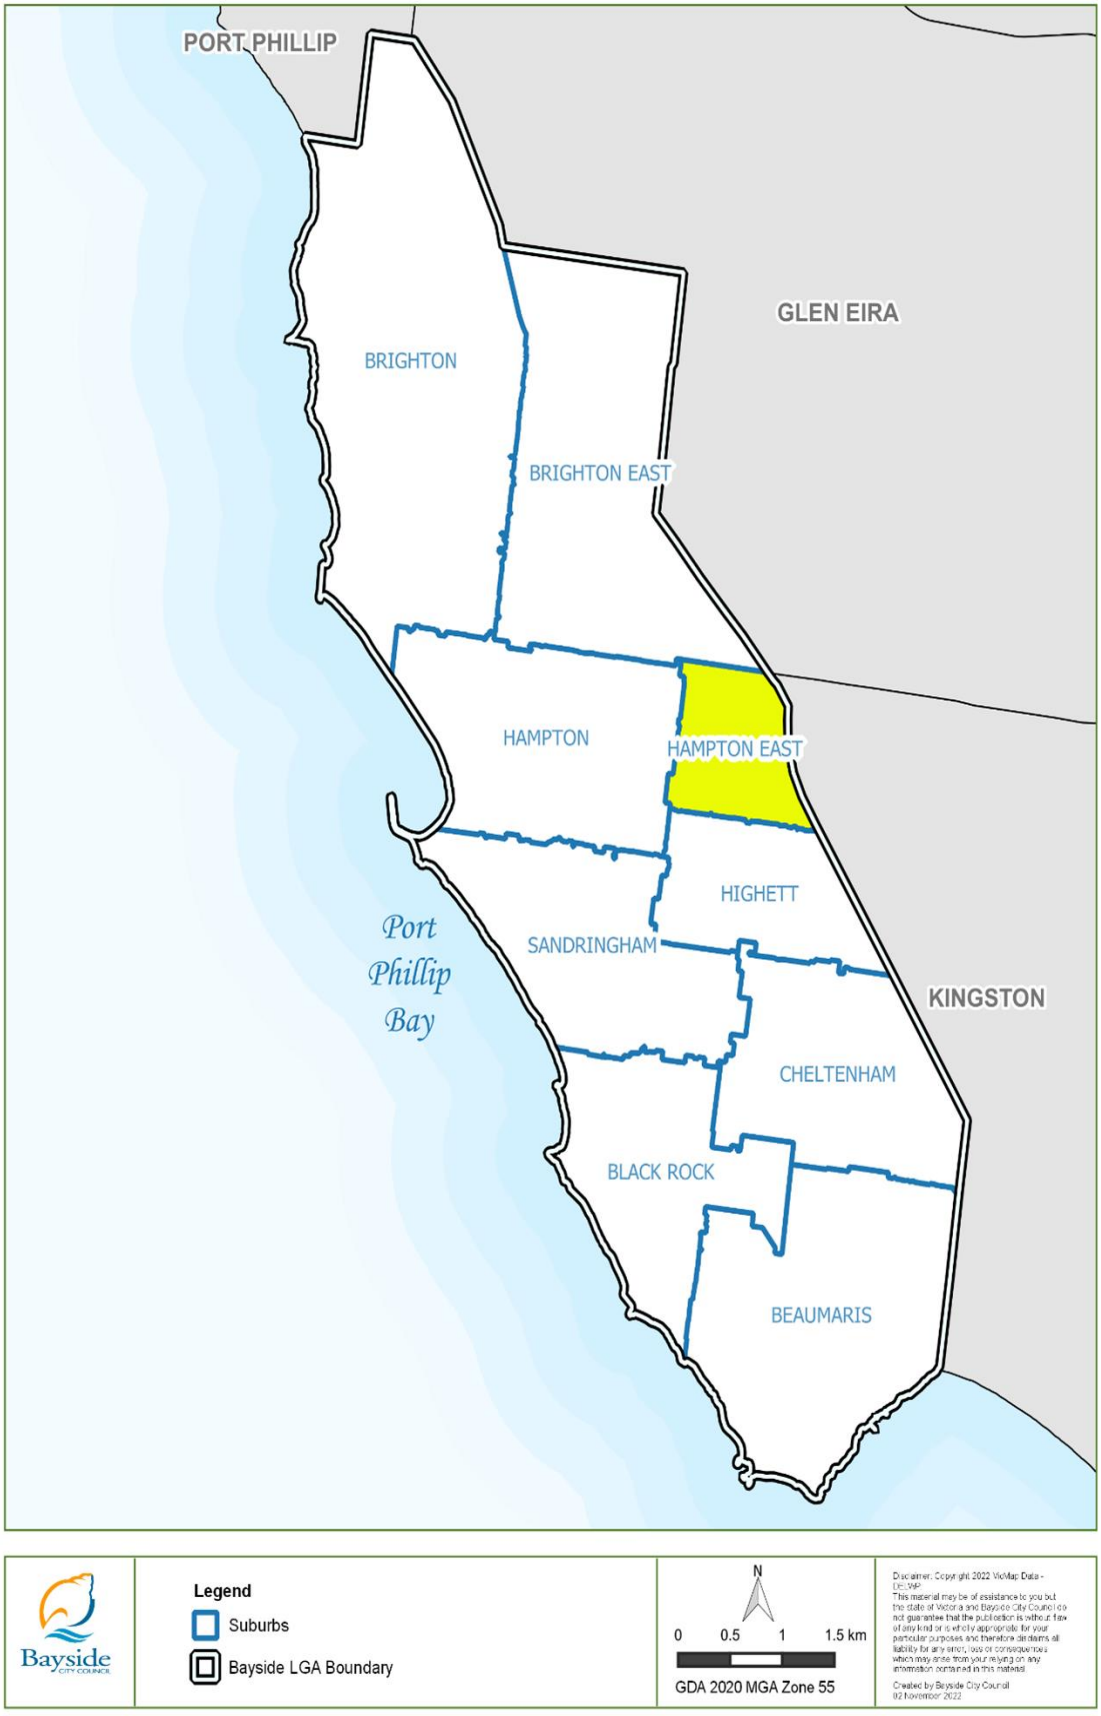
A key action from the Bayside *Urban Forest Strategy* is the preparation of Precinct Plans. Each Precinct Plan will be informed by community consultation and will provide set targets to respond to the individual needs, challenges, and aspirations of the locality.

The Precinct Plans will help guide the implementation of the Bayside *Urban Forest Strategy* in Bayside and direct Council's focus to areas with low vegetation, to protect and enhance neighbourhood character and help achieve the objectives of the Bayside *Urban Forest Strategy.*

The primary objective of the Precinct Plan is to prioritise areas of greatest need, including areas with the lowest existing percentage canopy tree cover, as well as areas that are strategically located to mitigate potential impacts from urban heat island effects (including within major activity centres that are experiencing increased density and construction activity), areas of declining canopy or aging trees, highly trafficked pedestrian routes and gaps or vacancies in public planting.

Within this document, specific direction is provided on the selection of appropriate trees for the precinct. The Precinct Plans are performance-based in that they establish the desired outcomes for streets but do not prescribe specific species for each location. Park and significant boulevard trees will be planted using existing master plans and site-specific plans to respond to the individual needs, challenges, and aspirations of the locality. This document focuses on the suburb of Hampton East.

Map 1. Hampton East's location within Bayside



Suburb Profile – Hampton East

Information in this Suburb Profile was accessed from Profile.id which utilises 2021 census data from the Australian Bureau of Statistics and population, household and age structure forecasts.

Population:
Hampton East is a changing suburb, both physically and demographically. Hampton East is currently experiencing moderate population growth, having increased by 272 people from 4,797 in 2016 to 5,069 in 2021 and is forecasted to increase to 6,329 (increasing by 24.4%) by 2041.

Age structure:
By 2041, it is anticipated that 30% of Hampton East residents will be above 60 years of age, which is an increase from the current 21.1% (2021). It is expected that older populations will have greater difficulty maintaining gardens and are susceptible to environmental challenges, such as heatwaves and increasing temperatures.

Senior residents who decide to remain in their family home after their children move out become what is known as 'empty nesters'. Many low density residential dwellings in Hampton East typically have moderate sized gardens with which empty nesters may have difficulty maintaining and therefore may require assistance now and in the future.

Residential developments:
The majority of new residential development has been delivered within the Hampton East Activity Centre. This activity centre encourages the provision of high-quality housing at a range of densities to meet the needs of a diverse community by offering a range of housing choices. Looking to the future, residential development forecasts assume the number of dwellings in Hampton East will increase by an average of 43 dwellings per annum to 3,260 in 2041. It is anticipated these new dwellings may come in the form of dual occupancies, town houses and low-rise apartment buildings, all of which will reduce the available permeable surfaces, especially when the conversion has been from a previous 1 dwelling on a lot. Minimising permeable surfaces can impact the ability to plant trees and allow them to grow to maturity and provide large canopies.

As the number of units and apartments across Hampton East increases, housing will diversify, providing ageing residents with the opportunity to downsize to smaller homes, while staying in their local community. Smaller homes for senior residents provide a number of benefits, including a minimal need for garden maintenance.

In addition to residential growth, commercial and retail development will continue to occur in the north-eastern part of the suburb alongside Nepean Highway and South Road, which is within the Activity Centre Zone 1 (ACZ1). Within this section of the activity centre, the following is encouraged:

- A health focus within the South Road Commercial Precinct to reinforce this existing specialisation, and
- The establishment of a clear brand for the centre as a lifestyle destination which specialises in outdoor-adventure retail, health services, cafes and high-quality diverse housing.

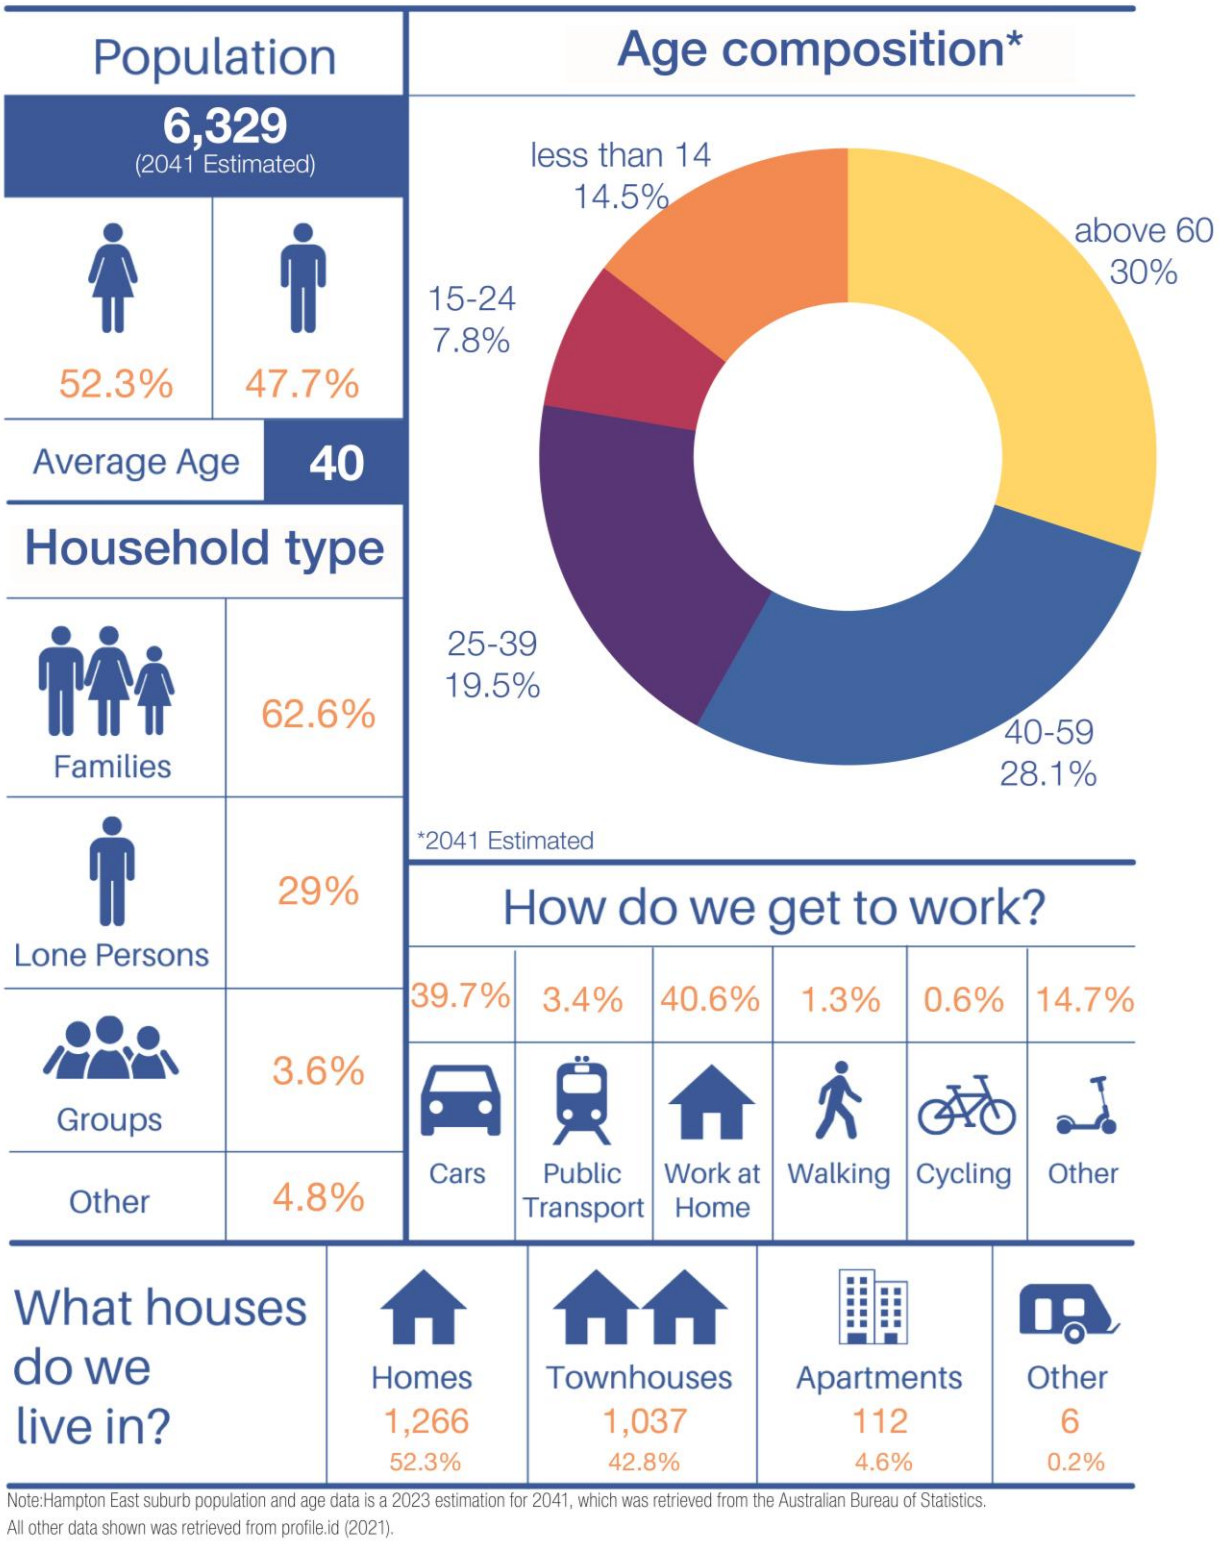
Climate change:
The effects of climate change are anticipated to have a significant negative impact on tree canopy and vegetation. Due to climate change, there will be an increase in severe weather events including more intense rainfall over summer, leading to more frequent and severe flooding events. Trees can play an important role in mitigating the impacts of a flooding event. The soil under trees and vegetation absorbs water as opposed to urban impervious surfaces (such as pavements and roofs)

over which water flows into the drainage system, raising the potential for flooding when the system is placed under strain.

The leafy canopy of trees also spreads out the rainfall and slows it down. This gives more time for the soil underneath to absorb the rainfall, resulting in less and slower runoff. As a result, the risk of flooding is reduced. When flooding does still occur, the volume and speed of the flood will be reduced. This will also reduce the need for larger stormwater gutters and pipes.

Mode of transport:
In 2021, 39.6% of Hampton East residents travelled to work by car. The Hampton East Activity centre is within close proximity to the Moorabbin Station which services the Frankston Line. There are also various bus networks that service the suburb.

Hampton East Forecast for 2041



Note:Hampton East suburb population and age data is a 2023 estimation for 2041, which was retrieved from the Australian Bureau of Statistics.
All other data shown was retrieved from profile.id (2021).

Aerial of Hampton East

The Vision for Hampton East's Urban Forest:

The Hampton East Urban Forest will continue to be enhanced in places where it is needed most, transforming the suburb to one with a rich urban forest featuring avenues of large canopy street trees that compliment current and future open spaces.

Planning controls applying to Hampton East

Residential and Activity Centre Zone

The majority of Hampton East's residential land is located within the Neighbourhood Residential Zone (NRZ), which is a planning zone that is applied to areas where there will be minimal residential growth. The NRZ has a maximum building height of two-storeys and where any new development does take place, it is usually alterations or additions to existing dwellings or the construction of a new detached dwelling or dual occupancy in place of the original detached dwelling.

Residential development within the Hampton East Major Activity Centre (which is within the Activity Centre Zone (ACZ1)) has seen a variety of dwellings being constructed in recent years and has allowed for heightened residential density outcomes. As there are various precincts that form part of the ACZ1, maximum building height limits range from three to six storeys depending on the proximity to the heart of the activity centre. This allows for higher density apartment developments in the centre with transitional built form sizes being encouraged on the edges of the activity centre.

Public Use Zone (PUZ) and Public Park & Recreation Zone (PPRZ)

Both of the abovementioned zones have been applied to sporting ovals, parks and reserves located within Hampton East.

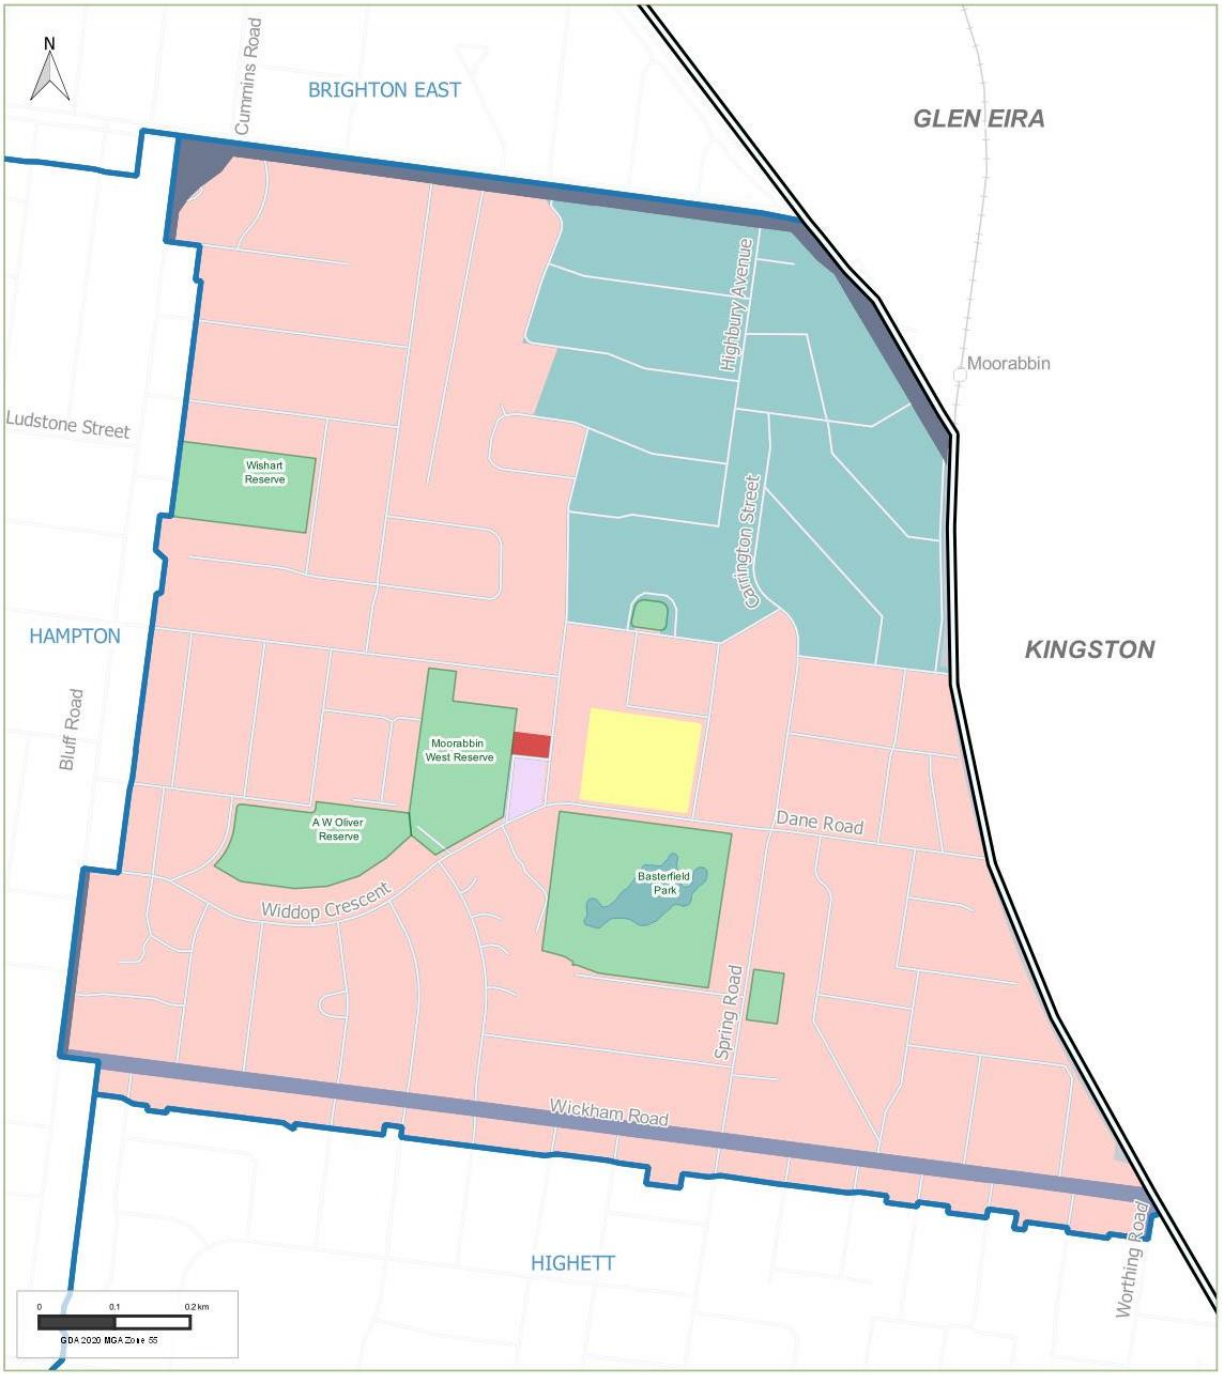
Heritage and Built Form Overlays

Several Heritage Overlay Schedules (HO) and Design & Development Overlay Schedules (DDO) are applied to land within the suburb which shape the way new development can be delivered. Heritage Overlays, in particular, provide for the protection of heritage significant buildings and places.

Neighbourhood Amenity Local Law 2021

Local Laws are laws utilised by Council to respond to issues and community needs within a local context. The *Neighbourhood Amenity Local Law* 2021 applies to the Bayside municipality, including trees on private land. The law determines that any tree on private land is protected if the *"single or combined tree trunk circumference is 155 centimetres or more at one metre above ground level."* If a tree is protected it means that a permit must be acquired from Council in order to remove or prune it. The same permit requirements apply to any tree on Council's Significant Tree Register.

Map 2: Planning Zone Controls in Hampton East



Hampton East Neighbourhood Character

Hampton East is a diverse suburb that is currently undergoing housing growth. It is important that new development respects, supports and enhances the cherished characteristics of their surrounding neighbourhood. Clause 15.01-5L 'Bayside preferred neighbourhood character' in the Bayside Planning Scheme provides general objectives and policy guidelines for neighbourhood character precincts that have been set across the municipality.

For many of the streets within the suburb, there is a mix of new contemporary detached dwellings and dual occupancies amongst intact single and double storey post-war dwellings that reflect a variety of architectural styles from that time. Dwellings are often double or triple fronted and comprising cream and red brick, weatherboard or fibro materials. Front setbacks vary across the area from 6 to 8 metres and dwellings are usually setback from both boundaries with garages sometimes built to the boundary, particularly for new residential developments.

Gardens are predominantly low lying, with exotic shrubs and lawn, with occasional large trees allowing views to the dwellings and providing a backdrop of vegetation. For those properties that have front fences, they are predominantly low or open style. Street tree planting is mixed and sporadic however appears to be more focussed along main roads and where there is proximity to parks and reserves.

Examples of neighbourhood character across various precincts within Hampton East

22 December 2022

The Urban Forest of Hampton East

In Hampton East, there is approximately 14.5% of tree canopy cover and 17% of understorey cover (2019), which is slightly below average in comparison to all other suburbs within Bayside.

While from aerial imagery (Map 4) it appears that trees within Hampton East are quite evenly spread throughout the suburb, from street view it is evident that canopy coverage is intermittent and ranges in varying sizes. Further, it is evident within the activity centre commercial area that there is a lack of tree and vegetation coverage upon those streets proximal to the Nepean Highway. Outside of these areas, there are some areas of significant tree and vegetation cover which is generally near or surrounding sporting ovals, reserves and open spaces.

History

Before European Settlement, Hampton East was inhabited by the Bunurong people of the Kulin Nation. In the 1850s, the area encompassing Hampton East was subdivided into 0.8 hectare parcels which were predominantly used for market gardening. The area remained rural and relatively unpopulated until World War II, despite regions to the west and south becoming urbanised before then. Suburban development began to increase following World War II, due to the heightened commercial and industrial development in proximity to the Nepean Highway. By the 1970s the suburb was largely developed.

Looking at aerial imagery from 1970, there is notably very little tree canopy cover across the suburb. This was likely subject to the fast increases in development and the conversion of land within Hampton East from bare, vacant land (with little vegetation, having been cleared for market gardening) into a mostly residential neighbourhood. It appears that the majority of tree planting has occurred since the 1970s and continues to occur to help enhance the urban forest within the suburb.

Contemporary issues impacting Hampton East's Urban Forest

There are a number of contemporary issues which impact the urban forest of Hampton East, causing a decrease in canopy cover. These issues are associated with climate change, and its flow on effects, including the urban heat island effect and erratic weather events, which impact upon and damage the health and viability of tree and ground cover vegetation. Increasing tree and vegetation cover will help alleviate rising temperatures and dramatic changes in climatic conditions by providing shade and cooling effects.

For new developments on private and public land, Council considers all possible design solutions and ensures the application has met all relevant criteria. However, even with these measures in place, the removal of tree and understorey vegetation is an issue facing Hampton East and is likely to increase due to a higher level of medium density residential development and the limitations on permeable surfaces appropriate for planting.

The removal of established gardens, large trees and understorey plantings is contributing to a loss of the distinct vegetation character and impacting the biodiversity. Other issues impacting the urban forest include:

- Trees nearing the end of their useful lifespan can also create safety issues particularly for more vulnerable residents. As a tree becomes older it loses its strength as is more prone to falling or losing limbs. Council monitors the health of its trees to ensure any hazardous trees are removed.

- The State Government has proposed the removal of the level railway crossing at Wickham Road. The construction of this new infrastructure will likely result in the need to remove existing trees and vegetation. Council will need to advocate to the State Government to replace the lost vegetation, and possibly gain more, by replanting on the site once the construction is completed.

- Vandalism of public and private trees is another issue contributing to tree canopy loss across Bayside. Illegal removal, lopping or poisoning of trees occurs throughout Bayside by members of the public for personal gain. A common example is the vandalism of trees due to the build up of leaf debris upon or near private property. Unpermitted removal, destruction, pruning and interference with trees and vegetation is illegal in Bayside. To deter vandals, Council has adopted a strong stance on vandalism and has installed signs and advertised on social media platforms an offering of rewards for information when an act of vandalism has occurred.

Image 2. Spring Road Park

Image 3. Moorabbin West Reserve

Tree canopy cover across Hampton East and various land uses

As indicated previously in this document, Hampton East has approximately 14.5% tree canopy cover and 17% understorey cover (2019) which is slightly below average in comparison to other suburbs in Bayside. Of the 14.5% of tree canopy cover within Hampton East:

- 63.3% is located upon private residential and mixed-use areas;
- 24.3% is located upon streets;
- 11.5% is on open spaces/reserves; and
- 0.91% is on public use areas

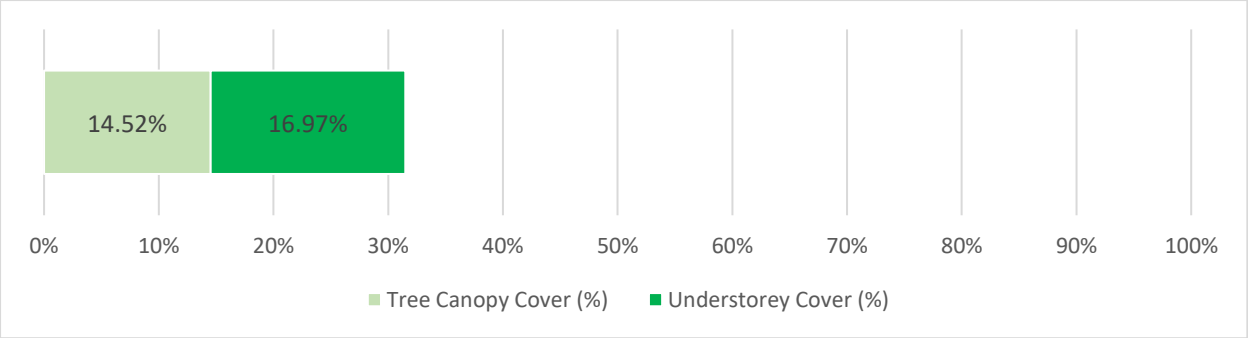
The coverage of trees upon private residential property is comparatively high when compared to other suburbs that also are undergoing increases in residential development. However, there appears to be less tree canopy coverage on open spaces in comparison to other suburbs which is likely due to the variation in uses of these spaces. There are several sporting ovals within Hampton East which required the clearing of trees.

There is also limited canopy cover within the Hampton East Major Activity Centre's commercial area. This area has limited setbacks, limiting the potential to provide large canopy trees. In such areas, innovative ideas such as green roofs and walls should be considered to increase greening.

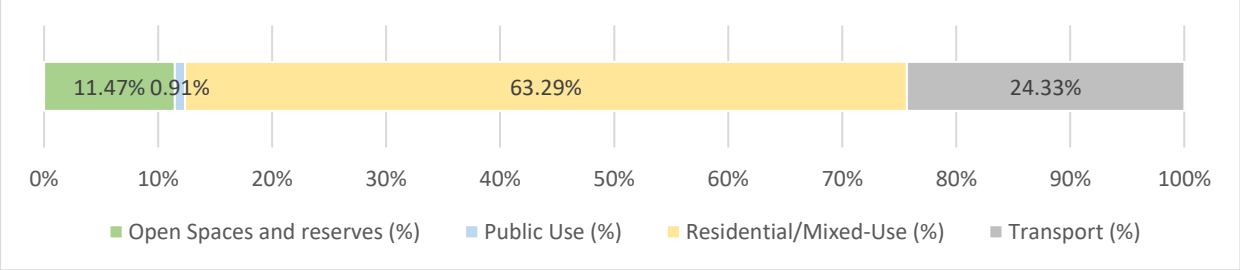
In 2022, there were 3,073 trees managed and maintained by Council throughout Hampton East, including 2,297 street trees, 775 park trees and 1 other location-specific tree. Monitoring the age, health and useful life expectancy of these trees is important to ensuring that Council understands the local conditions, maintains tree and understorey plant populations, and effectively plans for future planting programs and strategies across Hampton East.

In Hampton East, there is approximately 14.5% tree canopy cover and 17% understorey cover. The suburb of Hampton East will be a major contributor towards achieving Council's goal of 30% tree canopy cover by 2040 through increased planting on streets and within open spaces, and, where appropriate, through enhanced understorey cover within the public and private realm.

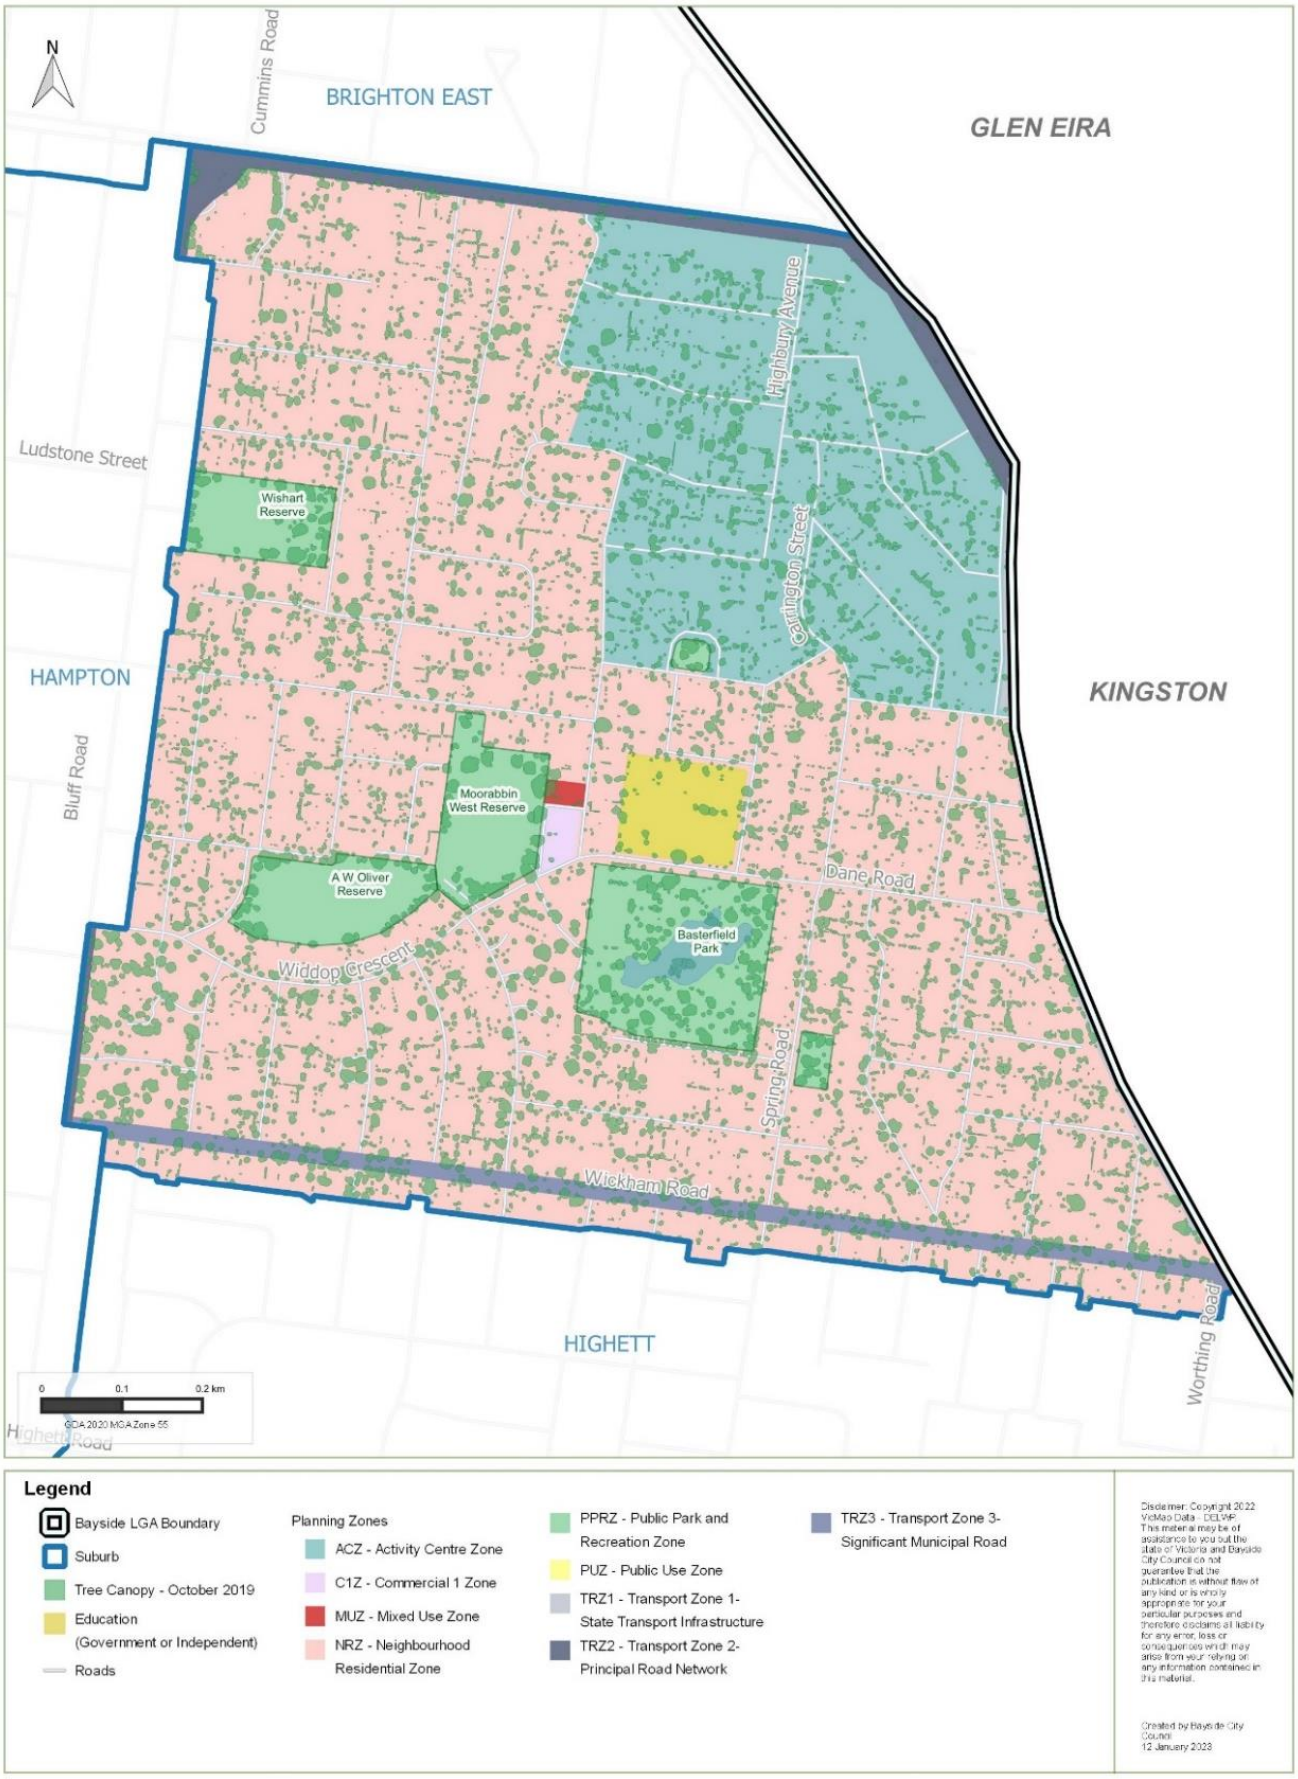
Graph 1. Total tree canopy cover in Hampton East



Graph 2. Tree canopy cover over various land uses in Hampton East



Map 4: Tree Canopy Cover in Hampton East



Council-managed Tree Population

Useful Life expectancy (ULE)

Estimating the useful life expectancy of the council-managed tree population is regularly undertaken and can inform the future management options for trees that have limited useful life left. The assessment of a tree's useful life expectancy provides an indication of health and tree appropriateness and involves an estimate of how long a tree is likely to remain in the landscape based on species, stage of life (cycle), health, amenity, environmental services contribution, conflicts with adjacent infrastructure and risk to the community.[2] It is not a measure of the biological life of the tree within the natural range of the species, but more a measure of the health status and the tree's positive contribution to the urban landscape.[2]

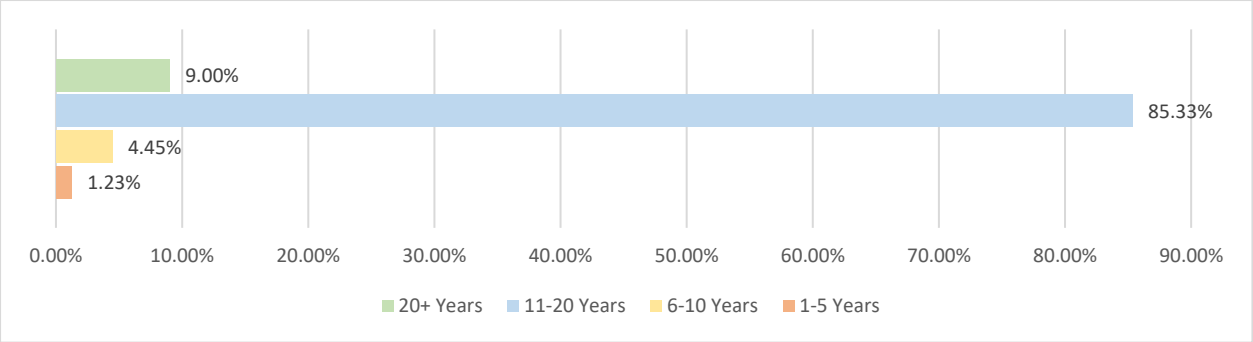
The locations where there is a high concentration of trees which may require replacement within the next 10 years include Basterfield Park, Parkview Crescent and King Street. Replacement planting will be based on the existing surrounding vegetation, landscape character and ability to enhance habitat.

In Hampton East, approximately 5.7% of council-managed trees are anticipated to reach the end of their useful life expectancy over the next 10 years. Map 5 shows the location of trees with low ULE and the locations where the concentration of these trees is high.

Where it has been found that trees reaching the end of their useful life still provide benefit and habitat, it should be retained as habitat tree as per the Tree Risk Assessment Tool (TRAQ).

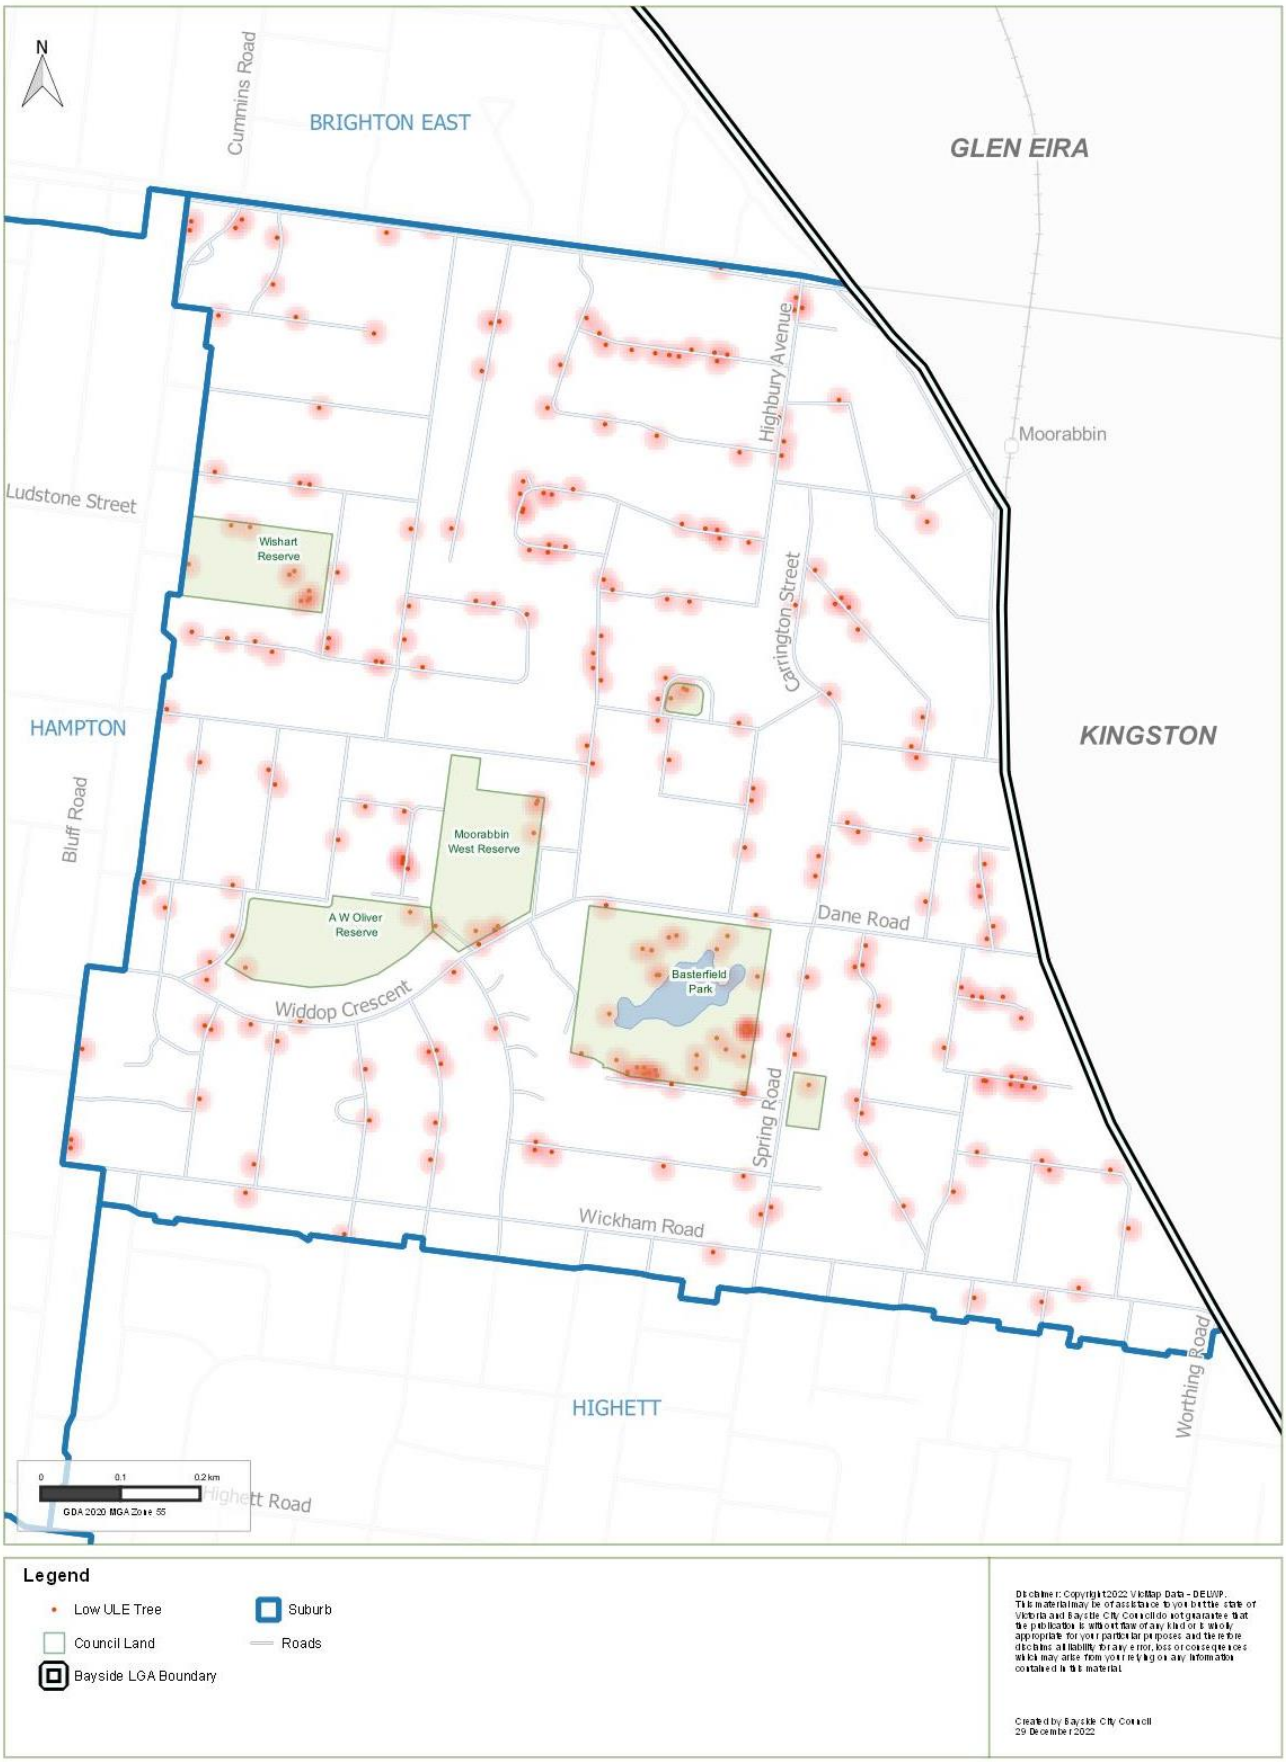
Succession planting will be undertaken where large scale planting is required.

Graph 3. Useful life expectancy of council-owned trees in Hampton East



[2] Department of Health and Human Services, 'Arboricultural Assessment Holland Court, Flemington– 3.7 Useful Life Expectancy(ULE)', 2017, Available at https://www.planning.vic.gov.au/__data/assets/pdf_file/0011/105500/SHRP-SH1-15.a.-Tree-Logic-Rpt_Holland-Court,-Flemington.pdf

Map 5: Location of trees with low ULE in Hampton East



Tree health and age

Approximately 90.6% of council-managed street and park trees in Hampton East were classified as being in good health, while 0.2% were classified as excellent. Trees that are classified as poor, dangerous or dead make up for 0.7% of street and park trees.

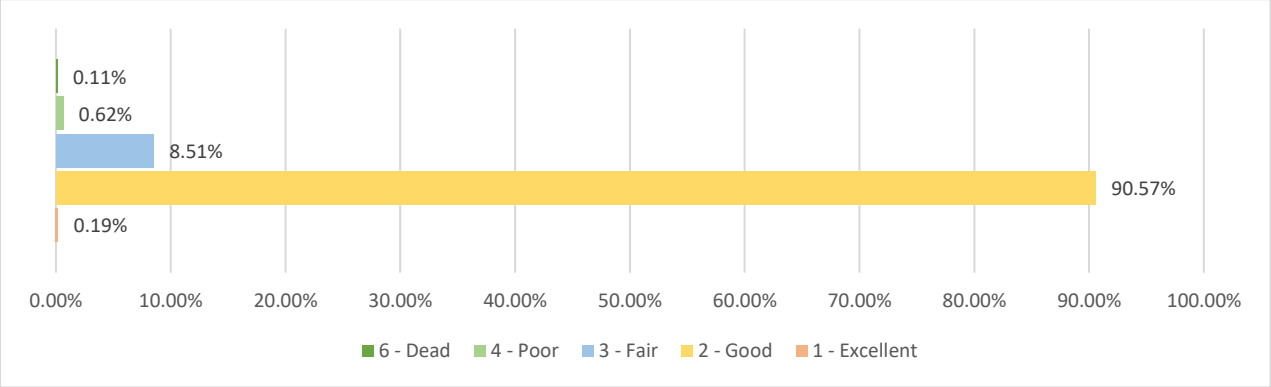
There is a reasonable level of diversity in the age of trees within the suburb. As seen in Graph 5, the highest proportions are new and semi-mature, making up 38.2% and 24.9% respectively.

Map 6 provides the location of those trees that are in poor health or dead. where tree health is poor, dangerous, and dead. There is a low number of trees in poor health or dead, most of which are located within Basterfield Park and others sporadically upon residential streets and South Road. Street trees that are dead should be removed but dead trees in parks can provide habitat for fauna. Council uses a Tree Risk Assessment Tool to determine which of these trees are providing habitat and which are a hazard to the community. This assessment is what determines whether a tree will be removed.

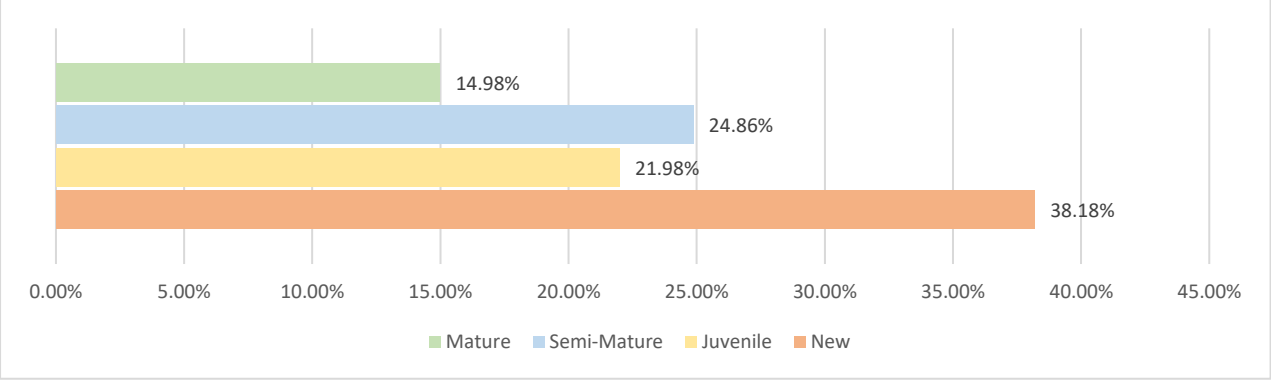
In 2022, 90.6% of the council-owned street and park trees in Hampton East, were classified as being in good health. Trees that are classified as poor, dangerous or dead make up for 0.7%.

Through the continued use of the Tree Risk Assessment Tool, Council will retain the trees and vegetation that provide a service to the ecosystem.

Graph 4. Tree health in Hampton East



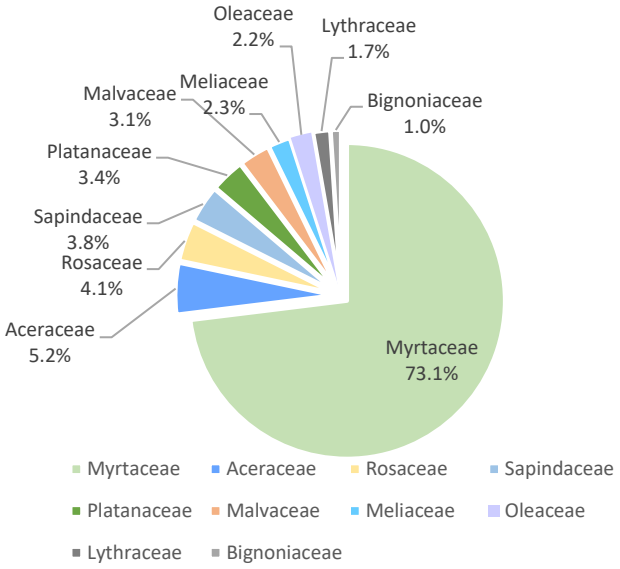
Graph 5. Tree age in Hampton East



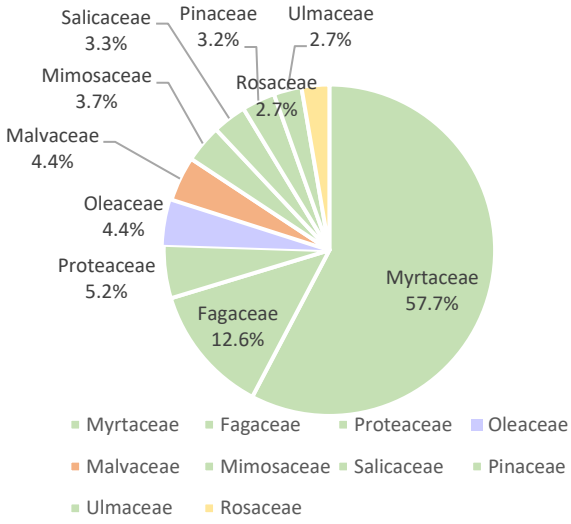
Map 6: Tree Health in Hampton East

Species diversity

A resilient urban forest has a diverse range of species from different families. As seen in graphs 6 and 7 below, Council managed street and park trees are predominantly within the *Myrtaceae* family, making up to 73.1% of all street trees and 57.8% of all park trees. This is then followed by the *Fagacaea* family (making up 12.6% of all park trees), and the *Aceraceae* family (5.3% of all street trees). Other families make up about 21.6% of street trees and 29.6% of park trees.



Graph 6. Diversity of street tree species in Hampton East



Graph 7. Diversity of park tree species in Hampton East

The reliance of a small number of species, and a lack of spatial diversity in species distribution leaves the urban forest vulnerable to threats from pests and disease. Diversification of the family composition of the urban forest is a key challenge that was identified in the Bayside *Street and Park Tree Guide* and reiterated within the Bayside *Urban Forest Strategy*.

The following families currently form part of the overall tree population in Hampton East's (including Pennydale) streets and parks at a significantly lower percentage than the *Myrtaceae* family. The inclusion and increase of these families should be targeted through the actions and implementation of this Precinct Plan, ensuring that different types of trees align with the neighbourhood character of the surrounding locality:

- Fagaceae
- Proteaceae
- Oleaceae
- Malvaceae
- Mimosaceae
- Salicaceae
- Pinaceae
- Ulmaceae
- Rosaceae
- Aceraceae
- Sapindaceae
- Platanaceae
- Meliaceae
- Lythraceae
- Bignoniaceae

To improve species diversity, Bayside City Council is undertaking investigations through its *Park Improvement and Habitat Linkage Plan* to understand which species (trees and vegetation) would best support specific locations in Bayside and encourage the rebuilding of the ecological foundations in Bayside.

Currently, the Hampton East street and park tree population is largely dominated by the *Myrtaceae* family (*eucalyptus* etc.), making up 57.8% of park trees and 73.1% of all street trees.

Understorey planting in Hampton East

This section investigates the potential habitat and biodiversity corridors in Hampton East across public and private land to understand where further opportunities are to increase habitat connectivity and improve biodiversity.

Understorey vegetation includes small trees, shrubs, herbs, grasses, mosses and lichens that occupy the vegetation layers below the canopy of taller trees.[3] Bayside's *Urban Forest Strategy* has three major goals to ensure the increase and improvement of the urban forest and the functions it serves. Two of these goals recognise the importance of understorey plantings. In addition, one of the strategic objectives of the Bayside *Urban Forest Strategy* is to support and enhance our local biodiversity and protect locally endangered and native species. This will be achieved by improving habitat connectivity and the protection and planting of Ecological Vegetation Classes (EVCs) through the implementation of the *Park Improvement and Habitat Linkage Plan* 2022 which involves identifying the suitable locations to prioritise understorey planting.

There is currently 16.97% of understorey vegetation coverage in Hampton East, with a majority of this being located within residential / mixed uses areas of within the suburb (70.1%), and this is likely due to this land use being the main component of the suburb. Opportunity exists to increase understorey vegetation within streets (16.1%) and open spaces and reserves (12.6%) as depicted in graph 8 & 8 and Map 7.

Council's priority will be to increase understorey planting in a range of places, particularly within streets with less than 20% tree canopy cover, roundabouts without current vegetation (Carrington Street - Warland Road and Wickham Road - Spring Road), core habitat patches/priority habitat improvement areas/priority linkage improvement areas (identified in Maps 10-11) and in gaps around sporting ovals (Wishart Reserve, Moorabbin Baseball and Cricket Club, Curly Rourke Reserve, Basterfield Park and Spring Road Playground). Council will also encourage residents to have biodiverse gardens with indigenous and native plants. Streets that have very low percentage of understorey planting (0-10%) have been identified in Map 7 and include sections of Nepean Highway, South Road, Widdop Crescent, Dane Road and Wickham Road.

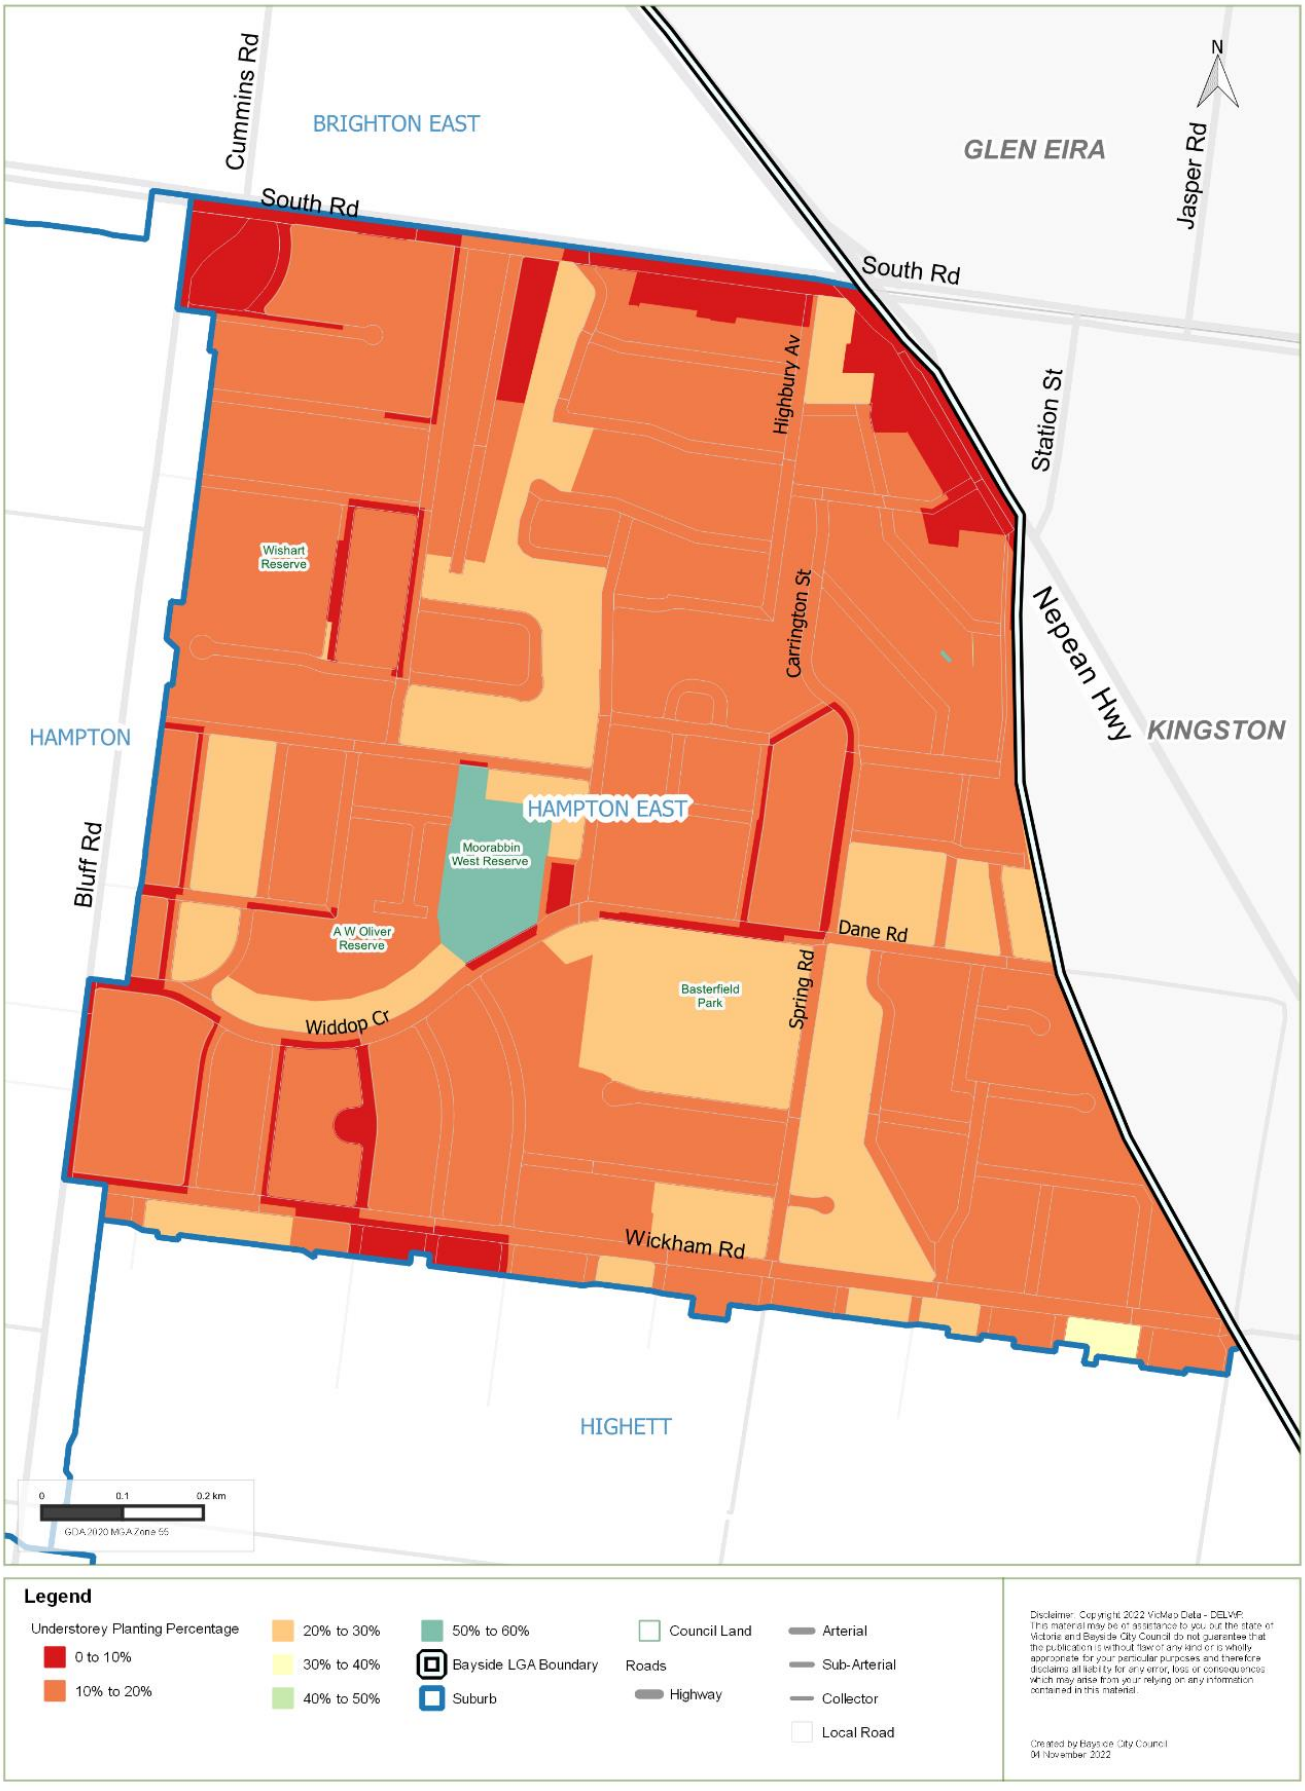
Map 7: Understorey Planting in Hampton East



Urban Heat Island

Urban heat Island effect in Hampton East

Urban heat island effect is the phenomenon of dense urban areas having significantly warmer air and land surface temperatures than surrounding areas.[4] It is primarily a result of impervious hard surfaces which generate heat combined with low vegetation cover that fails to provide adequate shade and natural cooling.

Urban heat data was captured in 2018 and is provided in Map 8 below. It is evident from this map that there are various areas of Hampton East, particularly in the north, east and centre of the suburb, that are undergoing increased temperatures and are subject to urban heat island effects.

Increased greening and enhancement of the urban forest has been identified as one of the most cost-effective means of mitigating the potential impacts of climate change and urban heat island effects. The Urban heat map referred to (Map 8) illustrates that the vast majority of Hampton East will be impacted by increased temperatures, albeit not within the highest bracket of impacts (8.5 and above).

Council will prioritise planting on council land in the vast majority of Hampton East through the Annual Tree Planting Program to help combat urban heat island effects. In conjunction, innovative techniques such as green roofs and walls as part of more intensive residential developments within the activity centre should be explored and encouraged to increase vegetation.

Due to larger areas that have impervious hard surfaces, that generate heat, and low understorey planting, the vast majority of Hampton East will be impacted by increased temperatures, albeit not within the highest bracket of impacts (8.5 and above).

Biodiversity Assessment

To help inform the Bayside *Urban Forest Strategy*, Council undertook a desktop biodiversity assessment across the entire municipality. The purpose of the desktop biodiversity assessment was to assess and identify the existing ecological values present within the municipality and identify key areas where biodiversity could be improved. This section of the Precinct Plan will focus on the findings of this assessment within the suburb of Hampton East.

Strategic Biodiversity Value Score

The Strategic Biodiversity Value (SBV) is a ranking system developed by the Department of Transport & Planning (DTP) that ranks the biodiversity contribution that a location has to Victoria's overall biodiversity. The SBV is presented as a score ranging between 0 - 1 and is mapped across all areas of Victoria.[5]

56 areas with SBV scores were identified within Bayside, all of which exist on public land and are identified in Map 9. Hampton East did not have any areas with an SBV score.

Ecological Vegetation Classes (EVCs)

As a part of this study a review of Ecological Vegetation Classes (EVCs) model was undertaken. A total of 8 EVCs were modelled within the Bayside area. The modelled distribution of the 2005 DELWP mapping extent, highlights that most of the study area has been cleared. This is largely due to the extensive residential development that has occurred, and the associated road, rail and commercial development.

Of the 8 EVCs modelled within Bayside, two were present within Hampton East, within Basterfield Park. The EVC is a very small section of Grassy Woodland / Damp Sands Herb-rich Woodland and the Sedgy Swamp Woodland. These identified EVCs have informed the species palette in Appendix 3 to this Precinct Plan. The species palette provides guidance on species of trees and vegetation that should be planted in order to enhance the character and enhance the ecological values of the urban forest.

Map 10 – Historic Ecological Vegetation Classes

Park Improvement and Habitat Linkage Plan 2022

The *Park Improvement and Habitat Linkage Plan* 2022 was undertaken by Council to assist with improving species diversity within Bayside and to understand which species (trees and vegetation) would best support specific locations in Bayside and encourage the rebuilding of ecological foundations. The objective of the plan is to assist in increasing the diversity of indigenous and native plantings in council-owned open spaces outside the conservation reserve system and to strengthen the connections between natural areas.

Two major actions identified in the *Park Improvement and Habitat Linkage Plan* that correspond to the Hampton East Precinct Plan are:

1. Streetscapes – Wherever possible, increase the extent of indigenous understorey vegetation in verges, nature strips, roundabouts, traffic islands and edges of carparks or other less frequented or unused areas.
2. Parklands – Expand on areas of existing native vegetation (both patches and individual trees) with dense understorey plantings, or identify locations for additional native plantings, to create structurally diverse 'habitat planting zones'.

Conservation reserves in Hampton East

Hampton East does not contain any conservation reserves.

Core Habitat Patches

Three core habitat patches have been identified within Hampton as areas where planting should occur to implement new or improve existing links to areas of open space and provide habitat corridors:

1. Wishart Reserve
2. Moorabbin West Reserve/A W Oliver Reserve
3. Basterfield Park.

12 January 2023

Priority Habitat Improvement Areas

Priority habitat locations are primarily associated with parks or reserves that support high-quality habitat values (such as bushland or foreshore reserves) or have the potential to provide core habitat with further investment through on-ground plantings and complimentary habitat structures.[6]

Priority Habitat Improvement Areas identified in Hampton East are:

- Wishart Reserve
- Moorabbin West Reserve/A W Oliver Reserve
- Basterfield Park

Priority Linkage Improvement Areas

Linkage Improvement Areas are primarily associated with public road reserves with the objective being to increase the functional diversity of vegetation within these areas to improve connectivity for a broader range of species.[6] Locations of priority linkages identified across the municipality have been restricted to public land, except for limited instances within privately owned golf courses.

- Wishart Reserve to Moorabbin West Reserve via Wishart Street, Short Street, Lonsdale Avenue, Apex Avenue
- A W Oliver Reserve to Hampton via Summit Avenue
- Basterfield Park to Highett via Dane Road, Widdop Crescent, O'Connor Crescent, Bluff Road, Wickham Road and June Street.

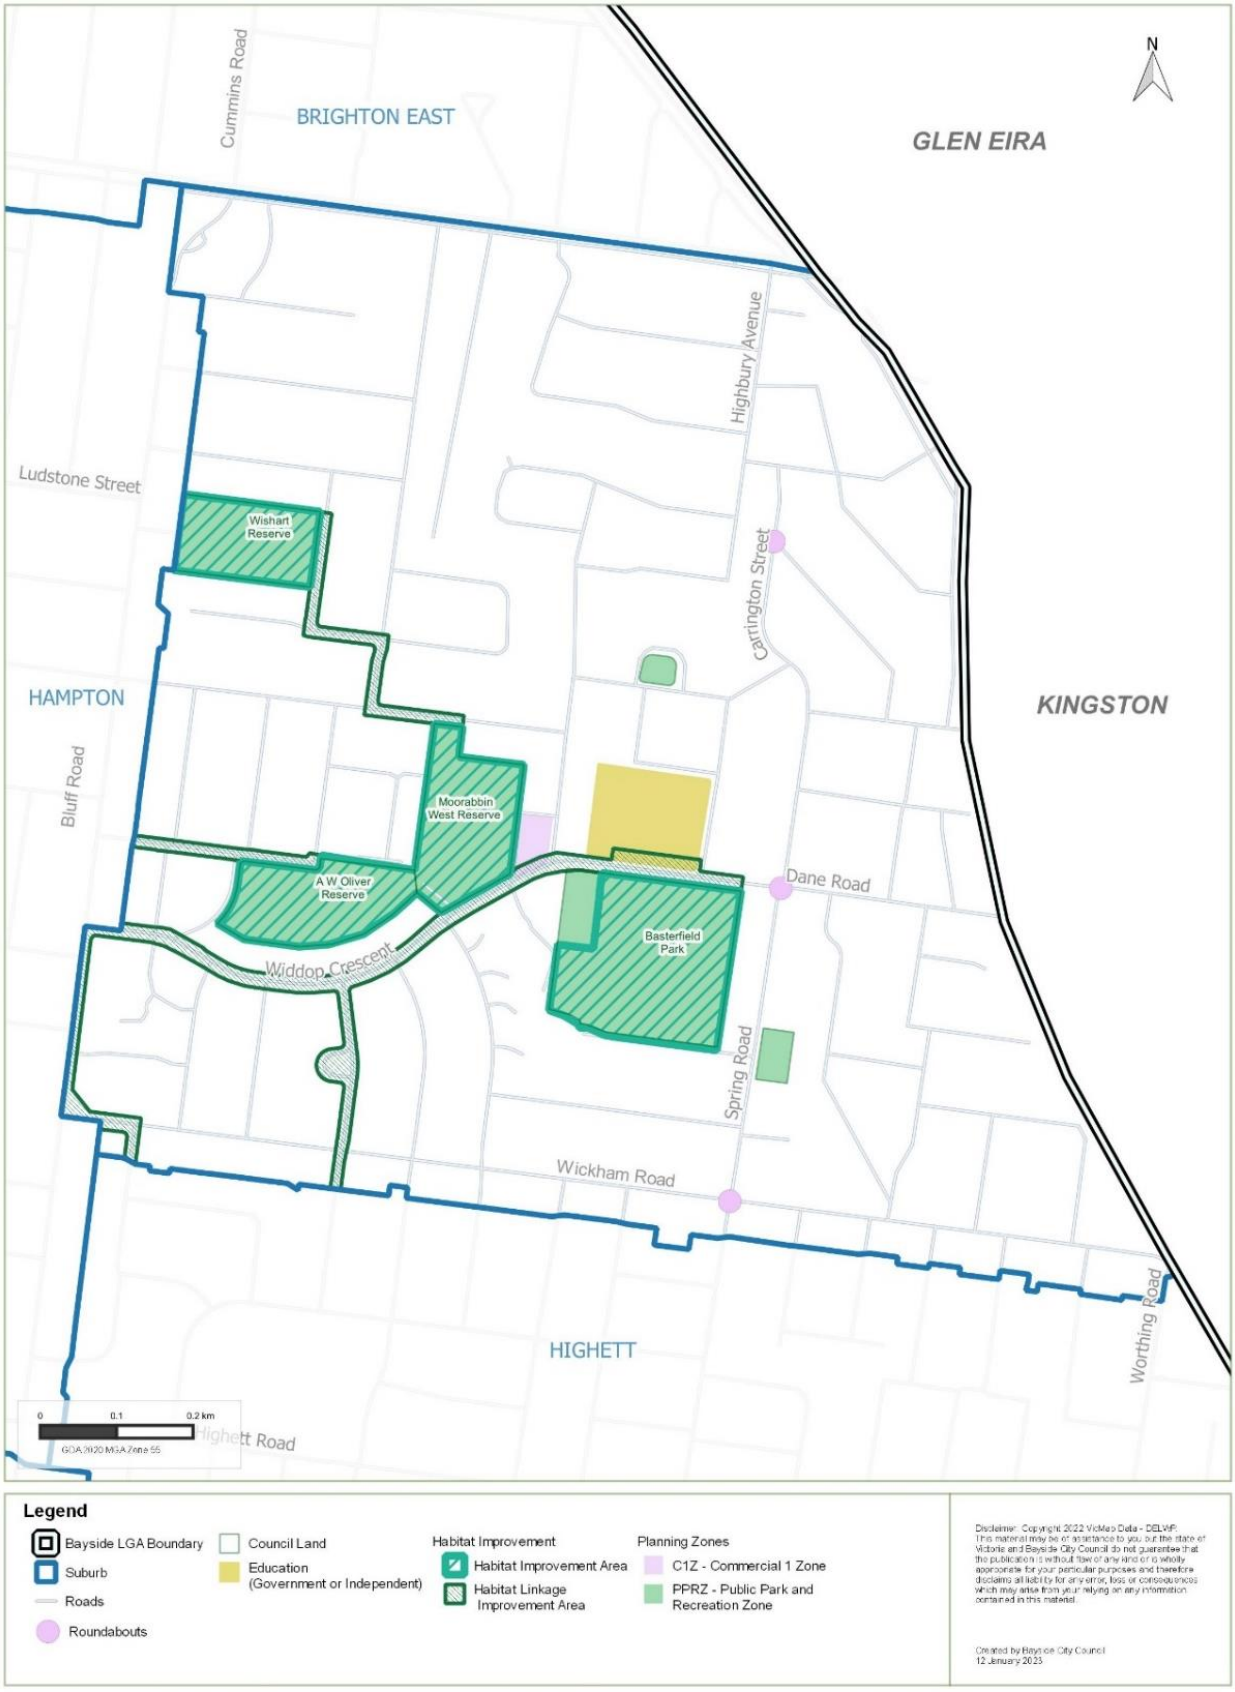
Map 12 – Habitat Linkages and Improvements



Trees on Private Land

While we encourage and support the increase of tree canopy cover on private land, it is recognised that the uptake of tree planting on private land can only be enforced through better planning mechanisms, education, advocacy and commitment from the community.

The objectives of the Bayside *Urban Forest Strategy* is to prioritise and strengthen the support for retaining existing trees on public and private land and to strengthen Council's ability to retain and monitor trees on both public and private land.

Regulations involving trees on private land

Under the *Neighbourhood Amenity Local Law 2021*, a permit is required for the removal of a tree that is on the Significant Tree Register or a canopy tree that has a single or combined trunk greater than 155 centimetres measured at 1 metre above ground level.

There are several mechanisms currently in place within the Bayside Planning Scheme that require a planning permit to be granted for tree removal. These mechanisms include but are not limited to the Vegetation Protection Overlay (VPO), Significant Landscape Overlay (SLO) and the Heritage Overlay (HO). The HO is however the only overlay that applies to selective private properties in Hampton East.

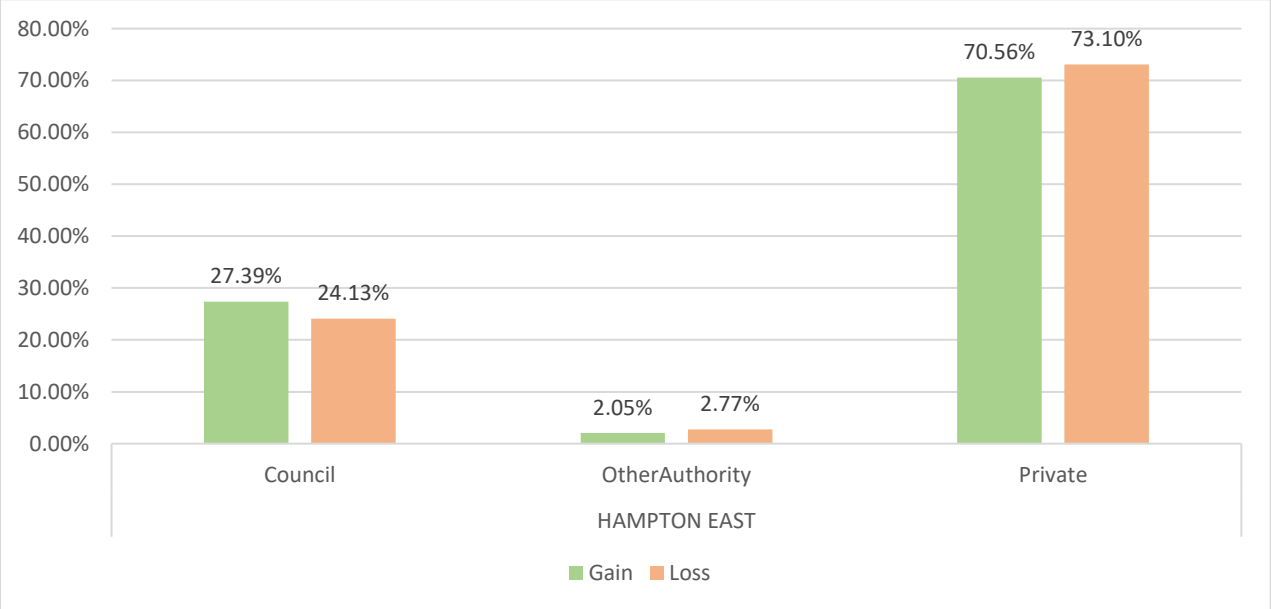
It is difficult to approximate the number of trees removed from private land each year under a planning permit as this is not separately recorded (and one application can be for multiple tree removals), let alone the extent of tree removal that is legal or illegal.

As indicated in Graph 10, while private land contributed to 70.6% of tree canopy gains in Hampton East, it also contributed to 73.1% of tree canopy losses. Conversely, Council-owned land contributed 27.4% to tree canopy gain versus 24.1% of tree canopy loss. Losses and gains were calculated by comparing 2015 and 2019 canopy cover data.

Tree loss and gain in Hampton East on private land

Map 13 shows tree canopy lost and gained in Hampton East from 2015 to 2019. The source aerial photography datasets were obtained from the State Government's Coordinated Imagery Program (CIP). The datasets from 2015 and 2019 were further compared by council's GIS team to identify changed areas of vegetation.

Graph 10: Tree Canopy across various land ownerships



Encouragement of trees on private land

As mentioned in the *Urban Forest Strategy*, community engagement will be essential in growing the urban forest on private land and Council will continue to be proactive in communicating the benefits of trees and vegetation on private land.

Council will also investigate opportunities to provide free tree and vegetation giveaways to residents. This will provide Council with a pathway to influence the tree and vegetation cover that exists on private land and help residents maintain the health of their trees and gardens. Bayside already has a strong network of 'Friends of' groups and community volunteers who carry out tree and vegetation plantings and would be great allies in this work.

Council will encourage landowner participation in greening, particularly for areas identified as having less canopy cover. This is being undertaken through communications and engagement actions that has a focus on education, awareness on the benefits of vegetation, and participation in increased tree planting through various education programs.

There has been strong interest from the younger population of Bayside to participate in increasing vegetation cover. Council will continue to run educational programs within schools and work alongside the community to reach the *Urban Forest Strategy* target of 30% canopy cover across Bayside by 2040.

As part of the Bayside *Urban Forest Strategy* Implementation Plan, Council is exploring opportunities to include further policies and planning mechanisms within the Bayside Planning Scheme with an aim to maintain and increase tree canopy and vegetation on private land.

Image 6. Leith Crescent, an example of a road with medium tree canopy coverage

Image 7. Kelsall Court, an example of a road with high tree canopy coverage

Key Constraints – Infrastructure

Finding locations for street and park tree planting can be challenging as it is important to ensure trees do not compromise the existing above and below infrastructure, as well as the existing uses and accessibility of the space.

Small tree under powerlines

Tree trimmed under powerlines

Certain pieces of infrastructure introduce constraints that impact the ability to plant trees. Street and park tree selection for trees growing under powerlines needs to consider a particular species' tolerance for pruning. For example, a tree that has a natural branching habit and a good wound response to mechanical damage would be considered an appropriate tree species for growing under powerlines.

In streets that have small or narrow nature strips, a smaller tree species will be considered for the powerline side of the street. In those circumstances, the trees on both sides of the street should have similar foliage and form to provide a consistent vegetation character for the street.

As a phase 1 action of this plan, Council will facilitate the negotiations between the residents and relevant authorities to support the undergrounding of powerlines (and other services) if there is sufficient interest in a street. Council will also advocate to VicRoads and other authorities for undergrounding the powerlines and plant vegetation on the Principal Transport Network. Other infrastructure that must be considered when undertaking tree and vegetation planting include:

- Footpaths
- Kerb and channel
- Roadways
- Playgrounds
- Pathways
- Private infrastructure
- Public infrastructure.

When selecting tree species for planting, Council officers consider which species will be the least destructive to underground infrastructure. Council will work with utility providers where required to ensure that infrastructure can be successfully maintained. This will ensure that Council can increase vegetation cover whilst protecting existing infrastructure and reducing demand for maintenance.

It is also important to note that infrastructure can also be constrained due to weather events. The *Climate Emergency Action Plan* 2020 requires that new infrastructure be designed to higher environmental standards and be located with consideration to future flood and storm surge risk. Existing infrastructure should be retrofitted to reduce environmental impact and to improve resilience. It is critical to consider how each piece of new infrastructure can contribute to a more resilient built environment. Adapting to climate change requires taking actions to lessen its adverse consequences and increase capacity to withstand the stresses and shocks associated with natural hazards and extreme weather events. Investing in climate change adaption helps to embed economic, social, and environmental resilience to protect the most vulnerable to the consequences of climate change.

Key Opportunities

Greening Hampton East

Increasing tree canopy cover to reach 30% and vegetation cover to reach 30% across Hampton East by 2040.

Biodiverse suburb

Create a diverse and healthy urban forest that reinforces greater outcomes for biodiversity.

Improve monitoring and maintenance

Improve the ability to monitor and track along with maintaining our existing canopy cover and avoid further decline.

Encourage residents and private owners

Learn together, educate each other, encourage and celebrate greater care and protection.

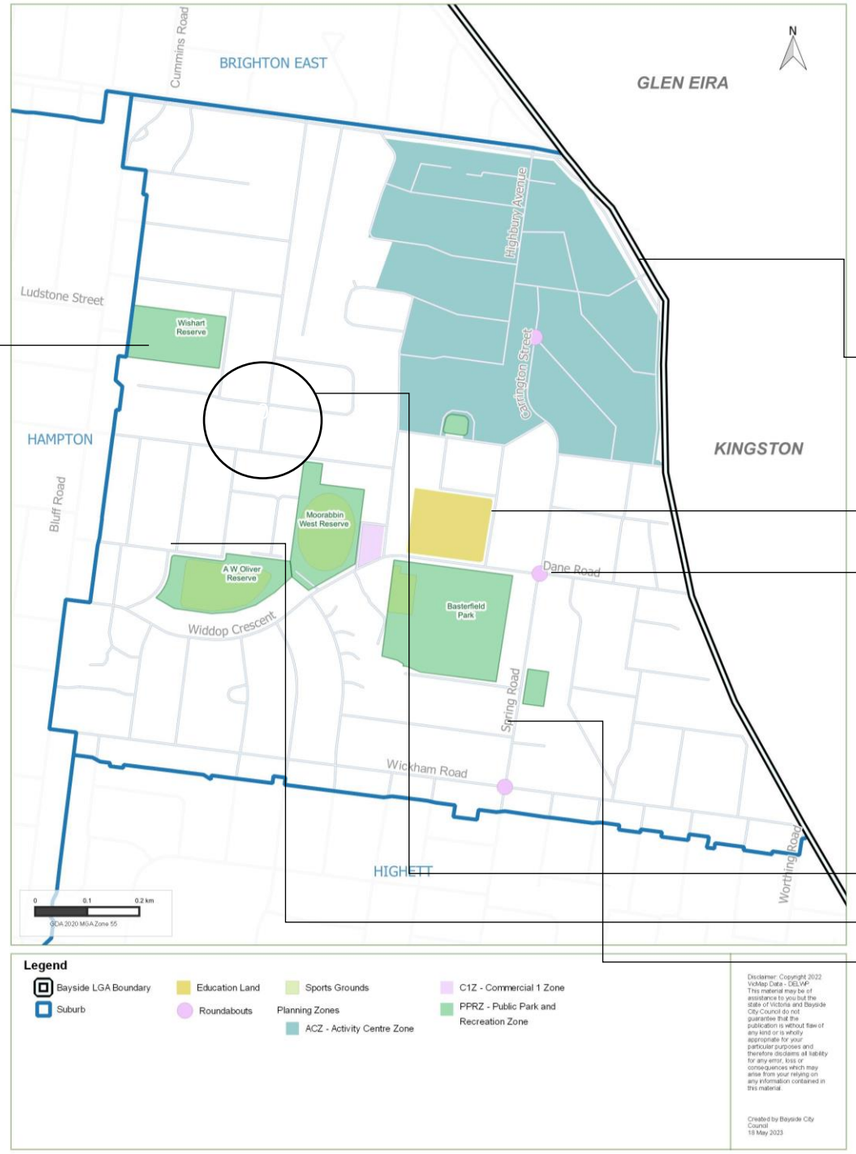
Nature strips
In terms of tree planting, the Street and Park Tree Management Policy states that:
'Council aims to have 100% of suitable sites within Bayside planted with a tree to contribute to the municipality's leafy character. Most property frontages in Bayside can accommodate at least one tree within the nature strip.'

Council-owned open spaces
Hampton East has approximately 11.4 hectares of open space that includes parks and reserves.

An opportunity exists to increase the number of canopy trees and vegetation planted in council-owned open spaces. Open spaces within Hampton East include Basterfield Park, Wishart Reserve, A W Oliver Reserve and Moorabbin West Reserve.

Council-owned projects
There is a significant opportunity to increase vegetation cover in Hampton East through council-owned projects like the renewal or development of community buildings and sporting club facilities. Each Council project has site-specific issues and opportunities that need to be considered as a part of the project scope. Examples of this include having a buffer around Council buildings and sporting ovals to ensure new plantings do not hinder future projects e.g. expansion of a community building. When planting near sporting ovals maintenance of future trees must be considered to ensure sporting events can still run.

Map 16 - Key Opportunities in Hampton East



Educational land
Continue to run student and community educational programs to increase awareness around vegetation planting and protection. There is one school within Hampton East, Berendale School.

Roundabouts
Roundabouts provide opportunities to plant canopy trees and understorey planting where appropriate. New plantings must not affect sight lines, safety or accessibility for larger vehicles. To ensure future planting is appropriate, a Road Safety Audit will be completed before and after installation.

Commercial areas
Across Hampton East there are two areas that are zoned for commercial use. These include:

- The commercial centre of Hampton East Activity Centre (Major Activity Centre)
- Keith Street and Widdop Crescent (Small Neighbourhood Activity Centre)

The character of these commercial centres can be improved by increasing the amount of vegetation. This will create more appealing centres that will attract a greater number of visitors and therefore increase business for local traders.

When planting trees in commercial areas conflicting priorities such as the demand for car parking, footpath activation, shop awnings, street lighting and road signage must be considered. Innovative techniques such as green roofs and walls and replacing trees in poor health should be explored and encouraged to increase vegetation.

Habitat Linkages
Increase canopy cover and understorey cover and improve habitat connectivity at:

- Wishart Reserve to Moorabbin West Reserve via Wishart Street, Short Street, Lonsdale Avenue, Apex Avenue
- A W Oliver Reserve to Hampton via Summit Avenue
- Basterfield Park to Highett via Dane Road, Widdop Crescent, O'Connor Crescent, Bluff Road, Wickham Road and June Street.

Prioritising Trees and Vegetation in streets

Streets make up approximately 22.8% of the total area of Hampton East. When prioritising where to plant, it is important to focus resources in the locations that need it most. This includes consideration of where we have opportunities to plant understorey, improvement of habitat, where the highest density of people reside, and where very low canopy cover exists.

Tree replacements are only identified for streets where the useful life expectancy of multiple trees is rated at less than 10 years.

Planting priorities

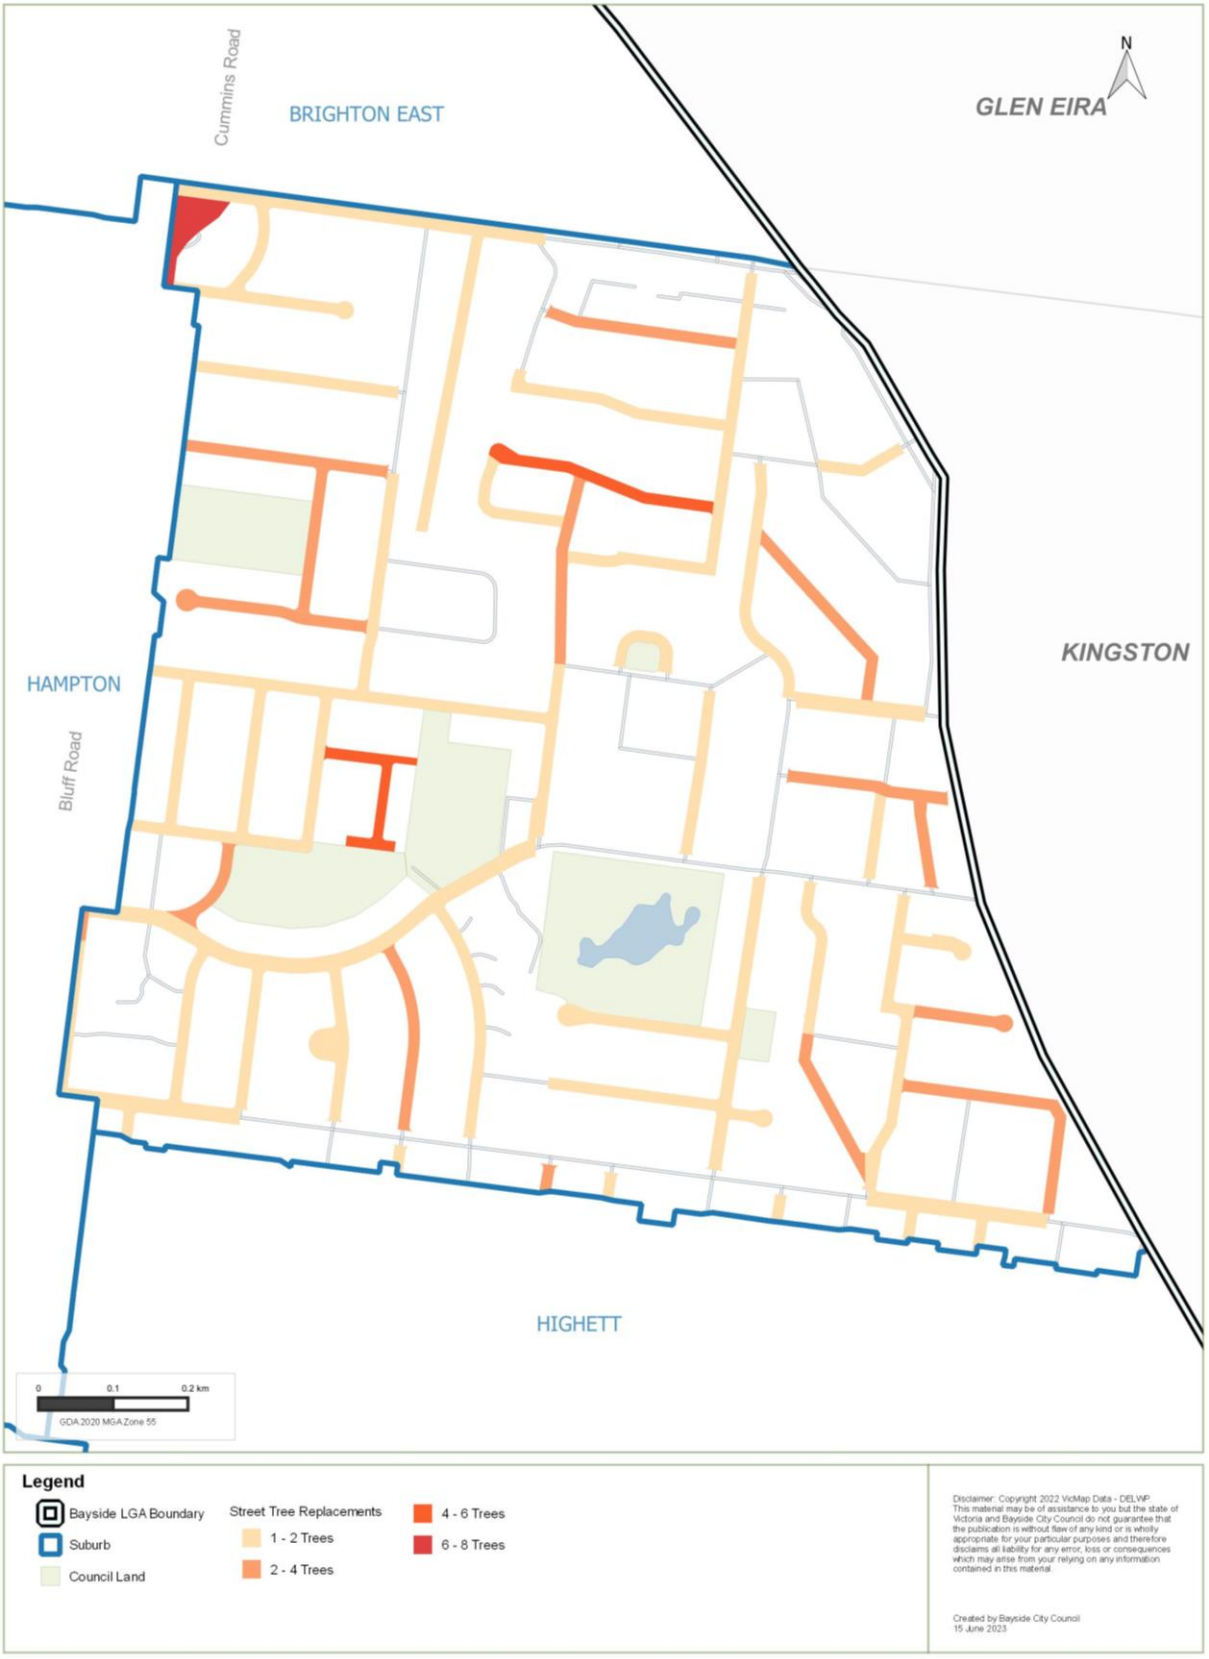
The Implementation Plan later in this document identifies phase 1 actions that are to be delivered within the next 5 years. These actions along with the *Park Improvements and Habitat Linkages Plan 2022* will identify priority areas and inform the Annual Tree Planting Program.

As a response to the Bayside *Urban Forest Strategy*, Council is committed to increasing tree planting every year. Maps 17 to 20 identify priority locations to be targeted in Council's Annual Tree Planting Program.

The Annual Tree Planting Program provides a great opportunity to increase species diversity, habitat and local character. A general rule of thumb that should be applied is the 10:20:30 rule, where the urban tree population includes no more than 10% of any one species, 20% of any one genus, or 30% of any family.

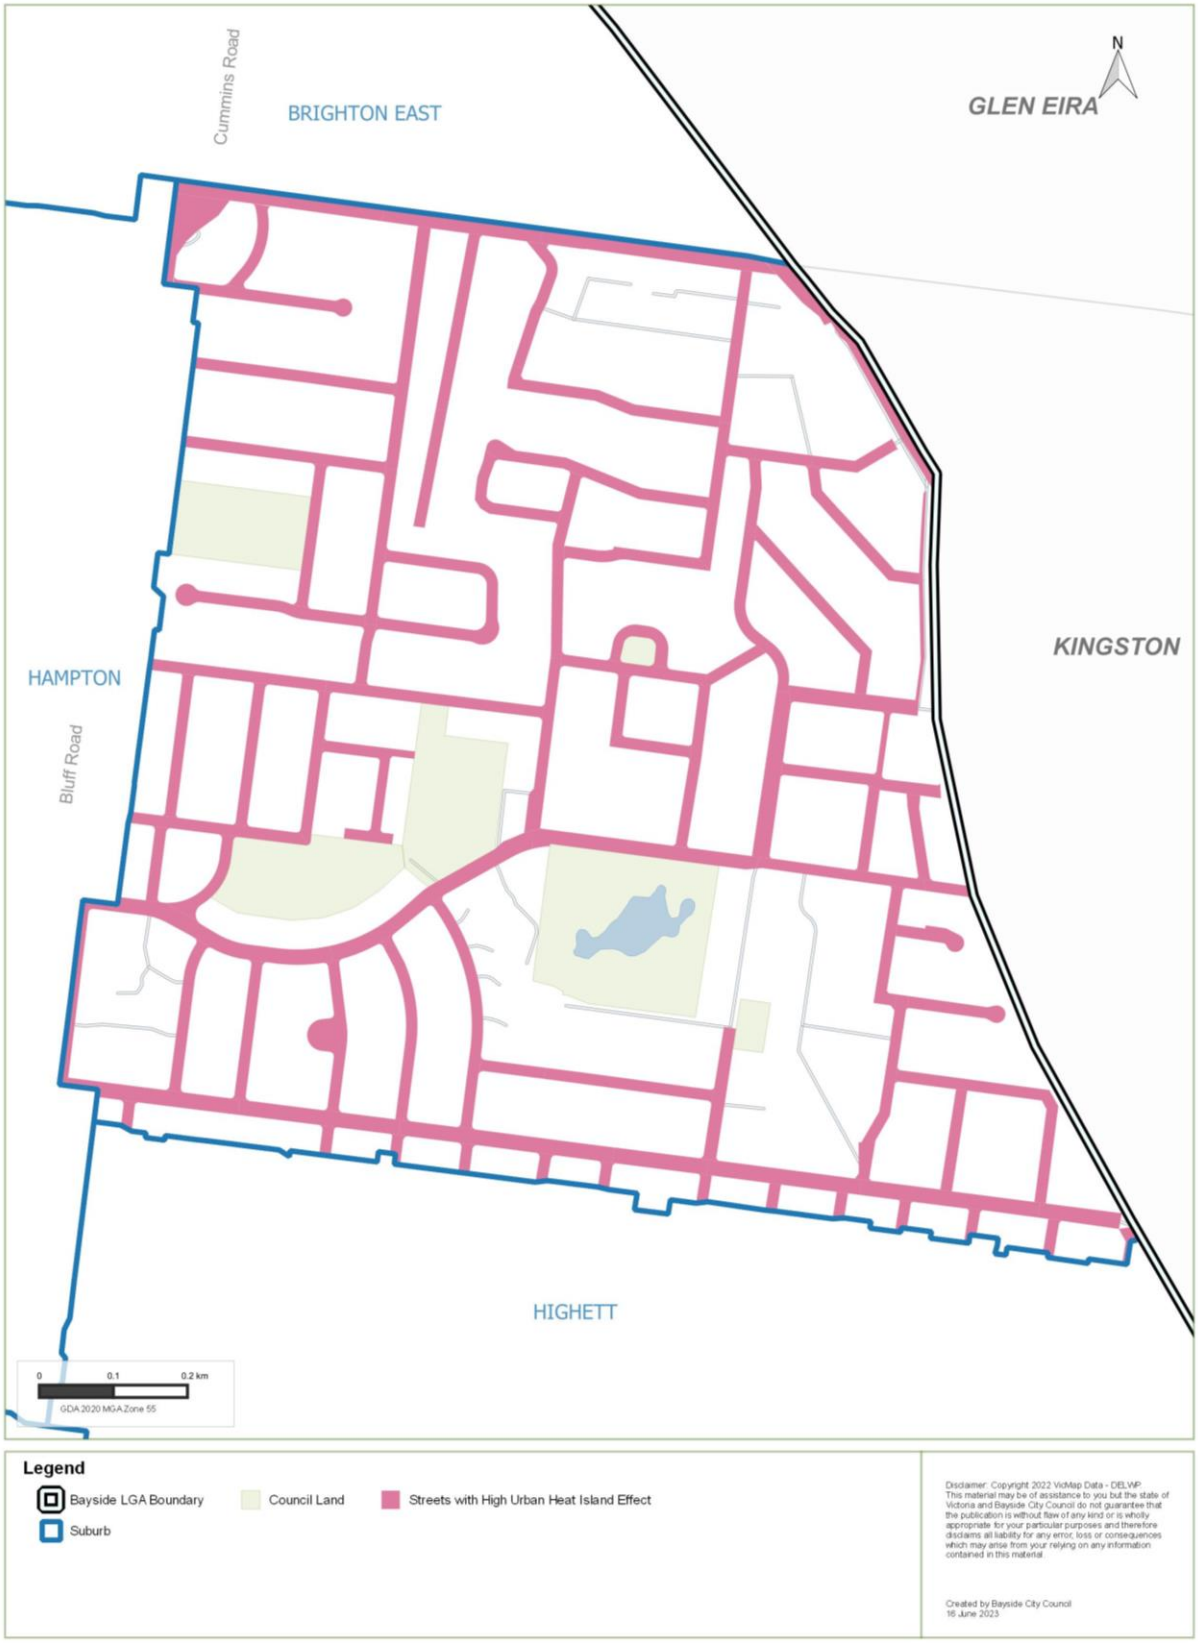
How the Precinct Plan guides planting

Map 17 – Location of Tree Replacements required in next 10 years in Hampton East



Map 18 – Streets with less than 20% Tree Canopy Cover in Hampton East

Map 19 – Streets with High Urban Heat Island Effect in Hampton East



Implementation Plan

The following set of actions specifically identifies outcomes for trees and vegetation planting. They provide the framework for change within Hampton East with outcomes informed by all of the other factors outlined in previous sections of this Precinct Plan.

Phase	Objective	Action	Responsibility	Timeframe	Resources required	Measure
Create a diverse and healthy urban forest that reinforces greater outcomes for biodiversity.						
Phase 1	Prioritise and increase planting on identified habitat and biodiversity corridors across public land to enhance habitat linkages.	Investigate opportunities to provide increased understorey planting in areas identified as part of Council's *Park Improvement and Habitat Linkage Plan* (Map 10 - 11), including: **Priority Habitat Improvement Areas:** • Wishart Reserve • Moorabbin West Reserve/A W Oliver Reserve • Basterfield Park **Priority Linkage Improvement Areas:** • Wishart Reserve to Moorabbin West Reserve via Wishart Street, Short Street, Lonsdale Avenue, Apex Avenue • A W Oliver Reserve to Hampton via Summit Avenue • Basterfield Park to Highett via Dane Road, Widdop Crescent, O'Connor Crescent, Bluff Road, Wickham Road and June Street. **Core habitat patches:** • Wishart Reserve • Moorabbin West Reserve/A W Oliver Reserve • Basterfield Park	Open Space	Year 1 to 2	Budget allocated for 2022/23 and 2023/24 financial years.	*Park Improvement Habitat Linkage Plan* and the Urban Forest Strategy Annual Reporting Program.
Phase 1	Enhance biodiversity outcomes on private land.	Encourage private landowners to plant vegetation on nature strips within their street and provide support and tools to assist. To ensure new plants enhance habitat and biodiversity, Council officers should recommend appropriate plants listed in Appendix 3 Species Palette of this document	Urban Strategy, Communication and Engagement	Year 1 to 5	Budget may be required to create and implement specific engagement plans.	Utilise engagement evaluation matrix to measure success. Increased number of community members involved in activities. Increased demand from residents for vegetation outside their house.
Phase 1 & 2	Create new open space, pocket parks, micro-forests in the suburb seeking new biodiversity or habitat corridors.	Investigate opportunities to seek funds to support the acquisition of land for new open spaces to connect core habitat patches.	Open Space, Urban Strategy	Ongoing	Resources required for advocacy	Number of grants / opportunities applied for.
Phase 1	Ensure humans and wildlife can simultaneously and safely access densely vegetated areas, streets and reserves	Support the undergrounding of powerlines where it is at the request of the community and at their full cost. Facilitate the negotiations between the residents and relevant authorities to support the undergrounding of powerlines (and other services) if there is sufficient interest in a street.	Asset Protection, Urban Strategy	Ongoing	No budget required	Number of streets where undergrounding of powerlines has been implemented.
Enhance landscape outcomes and increase tree and vegetation cover to reach 30% across Hampton East by prioritising areas in greatest need						
Phase 1	Increase tree and understorey cover at areas with greatest need to	Investigate opportunities to increase canopy tree and understorey planting at the following streets which have bene identifies as having low canopy cover (less than 20%):	Open Space	Year 1 to 5	Budget and resources will be required to increase the number of trees and understorey plants to be planted.	Number of plants planted

Phase	Objective	Action	Responsibility	Timeframe	Resources required	Measure
	enhance landscape outcomes, provide for heating and cooling benefits and combat climate change.	• Wickham Road • Worthington Road In addition, investigate opportunities to increase tree and understorey cover at the streets which may be subject to potential impacts from Urban Heat Island effect. Further investigation will be required to determine where would be of priority and where planting can occur with consideration of above and below ground infrastructure.				Urban Forest Strategy Annual Reporting Program.
Phase 1	Planting canopy trees and/or understorey vegetation on roundabouts that currently do not have vegetation to enhance landscape outcomes.	Investigate opportunities for trees and/or understorey planting at the following roundabouts (as per Map 16): • Carrington Street / Warland Road; and • Wickham Road / Spring Road. New plantings must not affect sight lines, safety or accessibility for larger vehicles.	Open Space, Integrated transport team to guide and undertake road safety audit before and after planting. Council's contractor (CityWide) health and safety standards to be referred.	Year 1 to 5	Budget and resources will be required to increase the number of trees and understorey plants to be planted.	Number of plants planted Urban Forest Strategy Annual Reporting Program
Phase 2	Increase utilisation of green walls and green roofs in Activity Centre area.	Encourage innovative greening in the Hampton East Major Activity Centre by promoting and piloting different greening initiatives. Investigate opportunities to introduce mechanisms to increase green roofs and walls within Activity Centres	Development Services, Economic Development, Strategic Planning	Year 5 to 10	Economic Development team may require budget to run pilot programs	Number of plants planted Urban Forest Strategy Annual Reporting Program.
Phase 1 and 2	Reframe Council's approach to major council-owned projects, capital infrastructure renewal projects as opportunity to increase urban forestry outcomes.	Explore opportunities within road reconstruction projects to provide new tree plots as boulevard planting or in between car parking bays to enhance tree and vegetation cover upon local streets.	Project Services	Ongoing	Budget will be considered as part of the project scope.	Number of plants planted. Urban Forest Strategy Annual Reporting Program.
Phase 1	Increase tree canopy cover by prioritising plantation in vacant tree sites.	As part of the Annual Tree Planting Program, identify the current vacant sites and prioritise planting at these sites.	Open Space	Ongoing	Budget and resources will be required to increase the number of trees and understorey plants to be planted.	Number of plants planted. Urban Forest Strategy Annual Reporting Program.
Learn together, educate each other, encourage and celebrate greater care and protection of the Bayside Urban Forest						
Phase 1	Increase planting on VicRoads that have less than 20% of tree canopy cover.	Advocate to the VicRoads and other authorities for increased planting on Nepean Highway, Bluff Road and South Road.	Open Space, Urban Strategy, Integrated Transport	Ongoing	No budget required.	A commitment made to plant trees on the streets maintained by VicRoads
Phase 1	Increase awareness amongst the community around the importance of vegetation through various programs and communication material.	Continue to run student and community educational programs to increase awareness around vegetation planting and protection.	Urban Strategy, Communication & Engagement	Ongoing	Budget may be required to create and implement educational programs.	Number of educational programs undertaken every year.
Phase 1 and 2	Ensure humans and wildlife can simultaneously and safely access densely vegetated areas, streets and reserves.	Advocate to VicRoads and other authorities for the undergrounding of powerlines.	Urban Strategy	Ongoing	No budget required.	Funding received and/or partnerships created.
Maintain our existing canopy cover across Brighton and avoid any further decline where possible						

Phase	Objective	Action	Responsibility	Timeframe	Resources required	Measure
Phase 1	Reframe Council's approach to major Council-owned projects, capital infrastructure renewal projects as opportunity to increase urban forestry outcomes.	Adopt an approach where trees are prioritised in planning for Council-owned projects and infrastructure renewal/ upgrades. In particular: • Where an existing habitat corridor is upon the site, ensure the siting of any new building footprint us of minimal impact • Avoid tree and vegetation removal • Consider the planting of new trees and vegetation at the project scope stage	Project Services and City Assets	Ongoing	Additional budget may be required for individual projects to ensure urban forestry outcomes are within scope	Increasing the number of projects where habitat and biodiversity are within scope Urban Forest Strategy Annual Reporting Program: number of trees planted at each project and number of trees removed
Phase 2	Ensure our urban forest is healthy and resilient.	Where trees reaching the end of their useful life expectancy have been assessed and are no longer providing a benefit to the surrounding habitat, removal may be required. Replacement trees should be selected based on the surrounding environment, neighbourhood character (where relevant) and above and below ground infrastructure. It is noted that there are various trees potentially reaching the end of their useful life expectancy, at the following locations (Map 5): • Basterfield Park • Wishart Reserve • Acheron Court Where it has been found that trees reaching the end of their useful life still provide benefit and habitat, it should be retained as a habitat tree as per the Tree Risk Assessment Tool (TRAQ).	Open Space	Year 5 to 10	Budget and resources will be required to increase the number of trees and understorey plants to be planted.	Number of plants planted. Urban Forest Strategy Annual Reporting Program.
Phase 1 and 2	Increase Council's ability to protect trees from vandalism.	Explore additional opportunities to minimise vandalism, particularly along the foreshore: • Consider the preparation of a communications and engagement strategy targeted to private property owners and the wider community.	Local Laws, Open Space	Year 1 to 3	Budget and resources will be required to explore opportunities.	Utilise engagement evaluation matrix to measure success.
Phase 2	Provide safer and cleaner streets for our residents and visitors.	As tree and vegetation cover increases with time, ensure future maintenance contracts appropriately funds the clean-up of tree leaves and debris on streets and public land.	City Assets	Year 5 to 10	Additional budget may be required to alter maintenance contract	The number of requests for additional service.
Phase 1	Strengthen requirements and advocacy to maintain and increase vegetation on private land.	Prepare Planning Scheme Amendments to strengthen the protection of vegetation on private land.	Development Services Urban Strategy	Year 1 to 5	Planning Scheme Amendment process to be funded via operation budget. Budget may be required to prepare detailed background information.	Adoption of Planning Scheme Amendments.

Appendix 1: Guiding Principles and Considerations

Council is responsible for the management of road reserves, parks, public spaces, and foreshore reserves and has an active tree planting and maintenance program, which is guided by the *Park and Street Tree Management Policy*. As such, Council has a greater degree of control and influence over the tree population on council-owned and managed land.

Planting in streets and parks presents a variety of challenges, and there are important principles to be utilised to overcome these challenges and increase and enhance Bayside's tree and vegetation cover. A complete and expanded set of these principles is included in the *Street and Park Tree Selection Guide* 2016 and should be referred to when designing or planting any streetscape. Examples of the below principles being utilised in street and neighbourhood settings are also provided within this Section of the Precinct Plans.

Hampton East has a distinctive character dominated by natives and local indigenous species. Future planting should focus on increasing the presence of indigenous species.

Planting types and locations in streets

1. Large canopy trees

A single large canopy tree provides greater benefits in terms of cooling, rainwater interception and other ecosystem services than multiple small trees totalling the same canopy extent. Prioritise the use of large canopy trees, with larger trees planted preferentially in centre medians or tree islands, then in the roadway and then the footpath. It is recognised that there are restrictions where medium or small size trees would be more appropriate due to competing infrastructure. Understorey planting in these locations is also encouraged.

2. Constrained planting spaces

a.) *Cut-outs.* Planting in cut-outs in the road or footpaths provides a useful alternative where there may be insufficient space on the nature strip. Suitability for planting in the road or footpath will depend on road or footpath width and other factors such as traffic volume and impact to on-street parking.

b.) *Planting in Road Reserve.* Designing in-road tree pits where there is opportunity to plant trees in between on-street parking spaces, traffic islands and buffer areas like street corners.

c.) *Narrow Streets.* Narrow streets, including narrow footpaths and no nature strips, are best landscaped via tree planting within the parking lanes to either side, although this is partly limited by the need to maintain car parking spaces.

3. Roundabouts

Roundabouts will be considered as opportunities to plant canopy trees and understorey planting where appropriate. New plantings must not affect sight lines, safety or accessibility for larger vehicles. To ensure future planting is appropriate a Road Safety Audit will be completed before and after installation.

4. Boulevards

For boulevards, consider inter-planting with large canopy trees and shrubs to enhance the existing canopy cover.

5. Streets and powerlines

a.) *Residential streets.* Low voltage overhead wires are present on one side of most residential streets. Where medians exist for large canopy tree planting, small to medium trees on the side with overhead constraints should be selected, always prioritising understorey planting.

b.) *Streets with small nature strip and powerlines:* In streets that have small or very small nature strips, a smaller growing tree will be considered for the powerline side of the street. In those circumstances, the trees on both sides of the street should have similar foliage and form to provide a consistent theme for the street.

c.) *Tree pruning:* In streets where footpath trees provide the only canopy, medium to large trees that can be effectively pruned around powerlines should be selected.

Street and park tree selection for trees growing under powerlines will consider the species' tolerance for pruning. For example, a tree that has a natural branching habit and a good wound response to mechanical damage would be considered an appropriate tree for growing under powerlines.

d.) *Underground powerlines*: Although overhead powerlines are typically more economical, they are susceptible to damage from windborne tree branches, debris, and high wind conditions from extreme weather.

Council will facilitate the negotiations between the residents and relevant authorities to support the undergrounding of powerlines (and other services) if there is sufficient interest in a street.

6. Planting patterns and species choice

Hampton's urban forest character is strongly connected to gum trees, and there will continue to be a higher population of gum trees in Hampton. In terms of opportunities to increase diversity in streets, kerb out stands, roundabouts and road ends should be considered as opportunities to plant species drawn from a wider palette that are unique to the location or intersection and provide visual interest. These areas should also be considered as opportunities to create landmark feature landscapes and to support understorey planting.

7. Important Facades

In streets with important public buildings or building that have heritage importance, deciduous trees should be given preference so that building façades are exposed over winter.

The convention of planting avenues, or consistent lines of a single species, can limit species diversity. However, avenue plantings are important to local character in many streets and open spaces. To balance these two conflicting pressures, it is important to identify ways to minimise the extent of homogeneous avenue planting while maintaining a strong design outcome.

8. Selection criteria for street trees:

The following factors can be considered for selection of suitable street tree species:

- Relationship with local landscape character
  - garden character, surrounding streetscape
  - vegetation protection overlays, heritage values
  - maintain existing landscape character by selection of low fruiting cultivators where possible
  - Replacing difficult to replace existing species with species demonstrating similar characteristics, e.g. growth habit, foliage colour and size.
- Ability to tolerate and thrive in a site's environmental conditions. Species that have or can adapt to local conditions like climate, soil, coastal and salt tolerances, pests and diseases.
- Possible future damage to infrastructure as assessed against identified current issues with footpaths, kerb and channel, roadways, private infrastructure and powerlines.

9. Permeable surfaces

Impermeable surfaces such as pavements, roofing and building coverage increase the risk of flooding in urban areas. Comparatively, permeable surfaces are made of porous materials that allow stormwater to flow though, which reduces the volume of stormwater runoff that enters the drainage

system. This helps improve water quality as it reduces the number of pollutants that enter waterways and habitats.

For new private residential development, at least 20% of the site should have surfaces that can absorb water such as lawns, garden beds or permeable paving. Council has developed the Integrated Water Management Plan 2019 – 2039, called ‘Water for Bayside’, to provide clear direction to deliver high priority integrated water management and water sensitive urban design (WSUD) activities. A key technique to improve water management is to increase permeability and incorporate WSUD into new developments and council projects.

Appendix 2: Case Studies

The following case studies showcase high-quality landscaping that combines the use of indigenous and native vegetation and high-quality design. A precinct's landscape helps define its character in much the same way as architecture or urban design because trees and other vegetation physically define a place. Landscapes are the setting for many everyday recreational and leisure activities and help forge a sense of connection to place.

1. Widdop Crescent

The landscaping at the corner of the Keith Street Shopping Centre provides a good example of understory vegetation surrounding a canopy tree. The inclusion of indigenous grasses strengthen Hampton East's biodiversity corridor by providing habitat connectivity to native fauna.

1 Planting and landscaping at Widdop Crescent, Hampton East

Appendix 3: Hampton East Species Palette

Species Palette
The following species provided are of guidance only. The Ecological Vegetation Classes (EVC) that exists in Hampton East have informed the species palette as these classes provides an indication of what native canopy species should be prioritised within the precinct.

Eucalyptus, Oak and other species are key genera across Hampton East, forming an important part of the character of the suburb's urban forest. Species from many other genera will also be planted to increase the diversity of tree species, with the aim to reduce the vulnerability of the Hampton East urban forest. A high diversity of plant species improves the chance of local ecosystems to survive destructive events or processes such as weed and pest animal invasion and climate change. Planting of specific species will depend on the geographic and environmental conditions, as well as the surrounding neighbourhood character.

Bayside City Council has also developed the *Live Bayside Plant Bayside* 2022 as a guide to inform all future planting on public and private land. Residents are encouraged to use the guide in conjunction with the Hampton East Species Palette when undertaking planting on their private properties. The *Live Bayside Plant Bayside* Guide features a selection of plants including:

- Herbs and groundcovers
- Creepers and climbers
- Lilies, grasses and tussocks
- Small shrubs
- Large shrubs
- Trees.

Council promotes the use of indigenous plants as they occur naturally within Bayside and have adapted to the conditions within the local environment such as soil and climate and which provide habitat and food for local birds, insects, and other native animals.

General Indigenous Planting List
The following list of plants is provided as guidance only and should be considered for planting on public and private land and provides additional information as to the suitability of plants to the surrounding environment.

Indigenous plants are the original flora, or plants that occur naturally, in a given location. Indigenous plants have adapted to the soils, topography and climate of the local area because they have evolved to the conditions within the local environment. Indigenous species also help to maintain the ecological balance of the local ecosystem, as plants and animals depend upon one another for their survival.

Of the 6 EVCs modelled within Bayside, two have been identified within Hampton East, within Basterfield Park. The EVC's found in Hampton East are Sedgy Swamp Woodland (707) and Damp Sands Herb-rich Woodland / Grassy Woodland (719).[5] If available, these species can be planted where soil conditions are suitable, in representation of the EVCs that were historically present within the suburb (as per Map 10).

The indigenous list provides information on each plant regarding the approximate size at maturity, the type of environment the species are most suited to, and the EVC classification that the plant is historically within (if relevant).

The list uses letters to denote the type of environment the species are suited to:

- A plants are adaptable, growing well in most soil types and aspects
- C plants are for the coast – dune scrub and woodland
- D plants prefer dry, well-drained soils and can tolerate dryness once established
- S plants prefer or tolerate full shade
- H plants prefer heath or woodland
- W plants prefer or tolerate moist soils, wetness and periodic inundation.
- Where plants are suitable within several environments, all relevant letters are written (e.g HCDA)

Plants that are not readily available, difficult to source or prone to weediness are marked on the list below, as follows:

- local to Bayside but difficult to propagate (not readily available)
- (W) local to Bayside but not propagated due to weediness.
- (S) not local to Bayside but could be available at a Sandbelt Indigenous Nursery (Greenlink Sandbelt Indigenous Nursery; Westgate Biodiversity: Bili Nursery & Landcare; Frankston Indigenous Nursery; Mornington Peninsula Indigenous Nursery - Briars Nursery.
- (N) not local to Bayside

Species Name	**Common Name**	**Key**	**EVC Mosiac**
Climbing Plants			
Billardiera mutabilis (syn. B. scandens)	Common Appleberry	HA	719, 3
Cassytha glabella (W)	Slender Dodder-laurel		892
Clematis microphylla var.microphylla	Small-leaved Clematis	HCA	919, 921
Comesperma volubile	Love Creeper		719, 3
Galium australe	Tangled Bedsttraw	Scrambler	919, 921
Hardenburgia violacea	Purple Coral Pea	HD	
Muehlenbeckia adpressa	Climbing Lignum	HCDSh	
Grasses and Tussocks			
Austrostipa flavescens	Coast Spear-grass	50cm x 50cm CA	921
Austrostipa mollis	Soft Spear-grass	30cm x 30cm HA	719, 921, 3
Austrostipa stipoides	Prickly Spear-grass	1m x 1m CD	
Baumea rubiginosa	Soft Twig-rush	Understorey graminoid	707
Caesia parviflora	Pale Grass-lily	10-50cm x 10-25cm HD	
Carex pumila	Strand Sedge	20-80cm CW	
Deyeuxia quadriseta	Reed Bent-grass	15cm x 40cm HD	719, 3
Dianella brevicaulis	Small-flower Flax-lilly	60cm x 50cm HCDShA	919
Dianella laevis	Pale Flax-lily	60cm x 50cm HA	
Dianella longifolia	Arching Flax-lily	To 1.3m x 0.4-1m	

Species Name	Common Name	Key	EVC Mosiac
Dianella revoluta	Black-anther Flax-lily	50cm x Spreading HCShA	719, 3
Dichelachne crinita	Long-hair Plume-grass	20cm x 30cm HD	
Distichlis distichophylla	Australian Salt-grass	10cm x Spreading CA	
Eragrostis brownii	Common Love-grass	20cm x 20cm HA	
Ficinia nodosa *	Knobby Club-sedge	50cm x 50cm HCA	919
Gahnia radula (S)	Thatch Saw-sedge		719, 892, 3
Gahnia siberiana (S)	Red-fruit Saw-sedge		892
Hypolaena fastigiata	Tassel Rope-rush		892
Juncus pallidus	Rush	1m x 50cm HCA	
Lachnagrostis billardierei (S)	Coast Blown-grass		
Lepidosperma concavum *	Sandhll Sword-sedge		719, 892, 921, 3
Lepidosperma laterale *	Variable Sword-sedge		719, 3
Lomandra filiformis	Wattle Mat-rush	50cm x 30cm HDShA	719, 3
Lomandra longifolia	Spiny-headed Mat-rush	1m x 1m HCDShA	719, 707, 3
Lomandra multiflora	Many-flowered Mat-rush	30cm x 30cm HAD	
Microlaena stipoides var stipoides	Weeping Grass	30cm x 50cm HCA	719, 3
Patersonia occidentalis	Long Purple-flag	40cm x 40cm HDW	
Poa labillardieri	Common Tussock-grass	50cm x 50cm HA	
Poa poiformis	Coast or Blue Tussock-grass	50cm x 50cm CA	919
Poa sieberana	Tussock-grass	30cm x 30cm HA	719, 3
Rytidosperma caespitosum (syn. Austrodanthonia caespitosa)	Common Wallaby-grass	40cm x 40cm HCA	
Rytidosperma geniculatum (syn. Austrodanthonia geniculatum)	Kneed Wallaby-grass	15cm x 15cm HCA	921
Rytidosperma racemosum	Clustered Wallaby-grass	20cm x 20cm HCDW	
Rytidosperma setaceum	Bristly Wallaby-grass	60-70cm x 40cm HCDW	
Schoenus brevifolius (N)	Zig-zag Bog-sedge		892
Spinifex sericeus	Hairy Spinifex	30cm x Spreading CDW	
Sporobolus virginicus	Salt or Sand Couch	10cm x Spreading CA	
Tetrarrhena juncea	Forest wire-grass		719, 3

Species Name	**Common Name**	**Key**	**EVC Mosiac**
Themeda triandra	Kangaroo Grass	50cm x 50cm HA	719, 3
Thelionema caespitosum	Tufted Lily	20-90cm x 0.5-1.30cm HA	
Tricoryne eliator	Yellow Rush-lily	30-50cm x 30-50cm HD	
Triglochin striatum	Streaked Arrowgrass	10cm x 20cm CW	
Xanthorrhoea minor subsp. lutea	Small Grass-tree	50cm x 50cm HD	719, 892, 3
Groundcovers & Wildflowers			
Acaena novae-zelandiae	Bidgee-widgee	Prostrate x 1m CShA	
Acrotriche serrulata	Honey Pots	10-30cm x 0.5-1m HD	719, 3
Actites megalocarpa	Dune Thistle	10-60 High CD	
Amperea xiphoclada var. xiphoclada	Broom Spurge	40cm x 40cm HD	719, 892, 3
Apium prostratum ssp prostratum	Sea Celery	20cm x 50cm CW	
Arthropodium strictum	Chocolate Lily	30cm x 30cm HA	
Astroloma humifusum	Cranberry Heath	10-50cm x 1-1.5m HD	719, 3
Bossiaea prostrata	Creeping Bossiaea	10cm x 50cm HD	719
Brachycome parvula	Coast Daisy	20cm x 20cm CW	
Burchardia umbellata	Milkmaids	30cm x 10cm HDW	
Carpobrotus rossii	Karkalla	10cm x 1m CD	921
Centella cordifolia (S)	Centella	understorey herb	707
Chamaescilla corymbosa	Blue Stars	10cm x 10cm HW	
Chrysocephalum apiculatum	Common Everlasting	20cm x 50cm HD	
Comsperma volubile	Love Creeper	Open slender vine HD	
Coronidium scorpiodies	Button Everlasting	30cm x 30cm HD	
Dichondra repens	Kidney-weed	Prostrate x 1m HCA	919, 719, 921, 3
Disphyma crassifolium subsp. Clavellatum	Rounded Noon-flower	Prostrate x 1m CA	919
*Drosera whittakeri subsp. Aberrans **	Scented Sundew		719, 3
*Drosera peltata subsp. Auriculata **	Tall Sundew		719, 892, 3
Einadia nutans	Nodding Saltbush	20cm x 1m HCDA	
Enchylaena tomentosa	Ruby Saltbush, Barrier Saltbush	Prostrate - 1m x 0.5-1m CD	
Epilogium billardierianum	Variable Willow-herb		707
Frankenia pauciflora	Southern Sea-heath	10cm x 50cm CD	
Geranium solanderi	Austral Cranesbill	20cm x 30cm HA	719, 3

Species Name	Common Name	Key	EVC Mosiac
Gonocarpus humilis (N)	Shade Raspwort		892
Gonocarpus micranthus	Creeping Raspwort	Prostrate x 50cm W	
Gonocarpus tetragynus	Poverty Raspwort	20cm x 30cm HA	3
Goodenia hummilis	Swamp Goodenia	5-10cm x .5-1.5m W	919, 707
Goodenia geniculata	Bent Goodenia	5-10cm x 10-50cm HA	
Goodenia radicans	Shiny Swamp-mat	10cm x 50cm CW	
Gratiola pubescens (N)	Glandular Brooklime	understorey herb	707
Haloragis brownii (N)	Swamp Raspwort	understorey herb	919, 921
Hibbertia acicularis	Prickly Guinea-flower	30cm x 50cm HD	
Hydrocotyle laxiflora	Stinking Pennywort	10-40cm x1-2m HDW	719, 3
Isotoma fluviatilis	Swamp Isotoma	Prostrate x 1m W	
Kennedia prostrata	Running Postman	Prostrate x 1m HCD	
Lachnagrostis billardierei (S)	Coast Blown-grass		919
Lagenophora stipitata	Common Bottle-daisy	5cm x 20cm HCA	
Laxmannia orientalis	Dwarf Wire Lily	5cm x 10cm HD	
Lobelia anceps	Angled Lobelia	Prostrate x 50cm HW	919, 921
Lobelia pratioides	Poison Lobelia	Prostrate x 50cm HW	
Opercularia ovata	Broad Stinkweed	10cm x 20cm HA	
Opercularia varia	Variable Stinkweed		719, 3
Orndullia reniformis (syn Villarsia reniformis)	Running Marsh flower		707
Pelargonium australe	Austral Stork's-bill	50cm x 50cm CA	
Pelargonium inodorum	Kopata	30cm x 30cm HA	
Pimelea humilis	Common Rice-flower	30cm x 40cm HA	
Pimelea octophylla	Woolly Rice-flower	0.4-1m x 20-50cm HD	
Platylobium obtusangulum	Common Flat-pea	40cm x 1m HD	892
Platysace heterophylla	Slender Platysace	30cm x 30cm HDW	
Podotheca angustifolia	Sticky-Long Heads	2 - 30cm high HD	
Poranthera microphylla	Small Poranthera		719, 3
Pterostylis longifolia	Tall Greenhood		719, 3
Pteridium esculentum	Austral bracken		919, 719, 892, 921, 3
Sarcocornia quinqueflora	Beaded Glasswort or Samphire	Prostrate x 50cm CW	919, 921
Senecio minimus (S)	Shrubby Fireweed	Understorey Herb	919, 921
Stylidium graminifolium	Grass Trigger-plant	30cm x 30cm HDW	

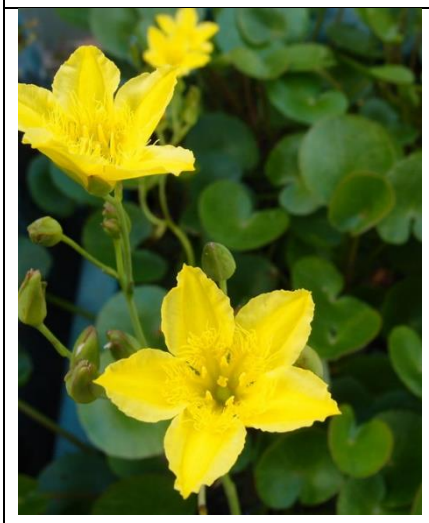
Species Name	**Common Name**	**Key**	**EVC Mosiac**
Tetragonia implexicoma	Bower Spinach	Prostrate x 1m CA	919, 921
Tetragonia tetragonioides	New Zealand Spinach	Prostrate x 1m CA	
Thysanotus patersonii	Twining Fringe-lily	0.1 - 1m HD	
Thysanotus tuberosus	Common Fringe-lily	15-60cm x 15-20cm HD	
Tracymene composita	Wild Parsnip	0.8-1.5 x 0.5-1m HD	
Triglochin proceum	Water Ribbons	Understorey graminoid	707
Viola hederacea	Ivy-leaf or Native violet	10cm x 1m HCWSh	919, 719, 921, 3
Small to Medium Trees (5m - 10m)			
Acacia implexa	Lightwood	8m x 4m HShA	
Acacia mearnsii	Black Wattle	7m x 4m HCD	719, 3
Acacia melanoxylon	Blackwood	8m x 5m HWA	719, 3
Allocasuarina littoralis	Black She-oak	8m x 3m HDSh	719, 3
Allocasuarina verticillata	Drooping She-oak	8m x 3m CD	
Bursaria spinosa	Sweet Bursaria	6m x 3m HCA	
Leptospermum laevigatum	Coast Tea-tree	6m x 3m CDA	919, 921
Melaleuca ericifolia	Swamp Paperbark	5m x 2m HCDWA	
Large trees			
Banksia integrifolia	Coast Banksia	15m x 6m CD	919, 921
Eucalyptus camaldulensis	River Red Gum	30m x 20m HA	
Eucalyptus melliodora	Yellow Box	20m x 10m HA	
Eucalyptus ovata	Swamp Gum	20m x 15m HW	707
Eucalyptus pauciflora	Snow Gum or White Sallee	10m x 6m HA	
Eucalyptus viminalis ssp pryoriana	Coast Manna-gum	15m x 10m HCD	919, 719, 892, 3
Eucalyptus radiata	Narrow-leaf Peppermint	15m x 10m HD	892
Small Shrubs (50cm - 2m)			
Species name	Common name	Key	
Acacia brownii	Heath Wattle	1m x 1m HD	
Acacia longifolia	Coast wattle		919, 921
Acacia suaveolens	Sweet Wattle	2m x 2m HD	
Acacia ulicifolia	Juniper Wattle	1m x 1m HW	
Allocasuarina paradoxa	Green She-oak	1.5m x 1.5m HDSh	3
Aotus ericoides	Common Aotus	1m x 1m HWD	

Species Name	Common Name	Key	EVC Mosiac
Atriplex cinerea	Coast or Grey Saltbush	2m x 2m CD	
Bossiaea cinerea	Showy Bossiaea	1m x 1m HCD	
Correa alba	White Correa	1m x 1m CA	
Correa reflexa	Common Correa	1m x 1m HShA	
Daviesia ulicifolia	Gorse Bitter-pea	1m x 50cm HA	
Dillwynia cinerascens	Grey Parrot-pea	.6-1.5m x .5-1.5m HD	
Dillwynia glaberrima	Heath or Smooth Parrot-pea	1m x 50cm HDSh	719, 892, 3
Epacris impressa	Common Heath	1m x 50cm HA	719, 892, 3
Goodenia ovata	Hop Goodenia	1m x 1m HCA	
Gompholobium huegelii	Common Wedge-pea	0.3-1m x 0.3-1m HDSh	
Hibbertia fasciculata var. prostrata	Stalked or Bundled Guinea-flower	50cm x 30cm HD	892
Hibbertia riparia	Erect Guinea-flower	50cm x 50cm HA	719, 3
Hibbertia sericea	Silky Guinea-flower	30-100cm x 60cm HD	
Isopogon ceratophullus	Horny Cone-bush	20-60cm x 0.5-1.2m HD	
Lasiopetalum baueri	Slender Velvet-bush	1m x 1m CDA	
Leptospermum myrsinoides	Heath or Silky Tea-tree	1.5m x 1m HA	719, 892, 3
Leucophyta brownii	Cushion Bush	50cm x 50cm CD	919
Leucopogon virgatus	Common Beard-heath	50cm x 50cm HD	719, 892, 3
Monotoca scoparia	Prickly Broom-heath		892
Myoporum petiolatum	Sticky Boobialla	1.5m x 1.5m CA	
Olearia ramulosa	Twiggly Daisy-bush	1.5m x 1m HD	
Pimelea humilis	Common Rice flower		719, 3
Rhagodia candolleana subsp. candolleana	Seaberry Saltbush	1m x 2m CA	919, 921
Ricinocarpus pinifolius *	Wedding Bush	1-3m x 1-2.5m HD	
Sambucus gaudichaudiana (N)	White Elderberry		919, 921
Suaeda australis	Austral Seablite	50cm x 50cm CW	
Medium to Large Shrubs			
Acacia sophorae	Coast Wattle	4m x 4m CA	
Acacia oxycedrus	Spike Wattle	4m x 3m HWA	
Acacia paradoxa	Hedge Wattle	3m x 2m HCA	719
Acacia stricta	Hop Wattle	4m x 2m HCShA	
Alyxia buxifolia	Sea Box	2m x 2m CD	

Species Name	Common Name	Key	EVC Mosiac
Banksia marginata	Silver Banksia	5m x 3m HDA	719, 892, 3
Cassinia aculeata (S)	Common Cassinia		719, 3
Cassinia longifolia	Long-leaf Cassinia	2-4m x 2-3m HDSh	
Exocarpos cupressiformis *	Cherry Ballart		719, 3
Indigofera australis	Austral Indigo	2m x 1.5m HA	
Kunzea leptospermoides	Yarra Burgan	3m x 2m HA	
Leptospermum continentale	Prickly Tea-tree	3m x 2m HWA	719, 892, 707, 3
Leucopogon parviflorus	Coast Beard-heath	3m x 2m CD	919, 921
Melaleuca squarrosa	Scented Paperbark	3m x 1.5m HW	
Myoporum insulare	Common Boobialla	5m x 3m CA	
Olearia axillaris	Coast Daisy-bush	2m x 2m CD	
Olearia glutinosa	Sticky Daisy-bush	2m x 2m CD	
Ozothamnus ferrugineus	Tree Everlasting	3m x 2m HWA	
Pomaderris paniculosa	Shining Coast Pomaderris	2m x 1.5m CDA	
Solanum laciniatum	Large Kangaroo Apple	2m x 2m HCA	
Viminaria juncea	Golden Spray	4m x 2m HA	

Seaberry Saltbush	Rounded Noon-flower	Bower Spinach
		Common Wallaby-grass	Beaded Glasswort	Cushion Bush
		Knobby Club-sedge	Tangled Bedstraw	Coast Blown-grass
		

Bundled Guinea-flower	Heath Tea-tree	Common Flat-pea
		Zig-zag Bog-sedge	Tassel Rope-rush	Shade Raspwort
		Small Grass-tree	Red-fruit Saw-sedge	Broom Spurge
		

Running Marsh-flower	Centella	Swamp Goodenia
		


Glandular Brooklime	Pithy Sword-sedge	Soft Twig-rush
		
Variable Willow-herb	Water Ribbons	Prickly Tea-tree
		

Native and Exotic Species List

Native species are plant species that did not historically originate within the bayside region but were extant in other regions within the Australian continent. Exotic species are those plants that have been introduced and are not native to Australia and therefore did not historically occur within Bayside.

Bayside's urban forest is a mix of native, indigenous and exotic species. While priority is placed on increasing the use of indigenous species, the historic planting of exotic, native and indigenous species is a core element of the character in certain areas of Bayside.

The use of native and exotic plants in this list is encouraged in areas where it is considered to have a positive impact on the surrounding environment and neighbourhood. This is of relevance where the existing plant(s) enhances the neighbourhood character. In these areas replanting like for like is encouraged.

Council also utilises various native and exotic plant species as part of its Annual Tree planting program, as listed in the Street and Park Tree Management Policy.

Native Species List

Botanical name	Common name
Climbers and Scramblers	
Muehlenbeckia adpressa	Maidenhair Vine
Pandorea spp.	Wonga Wonga Vine
Hibbertia scandens	Climbing Guinea Flower
Clematis microphylla	Small leaved Clematis
Kennedia spp.	Dusky Coral Pea
Hardenbergia componiana	Native Wisteria
Cissus antarctica	Kangaroo Vine
Jasminum suavissimum	Native Jasmine
Gynochthodes jasminoides	Jasmine Morinda

Botanical name	Common name
Groundcovers, Grasses <1m	
Acacia SPP.	Wattle
Acacia spp.	Prickly Wattle
Allocasuarina spp.	Sheoak
Alyxia buxifolia	Sea box
Anigozanthos spp.	Kangaroo Paw
Aotus ericoides	Common Aotus
Atroplex cineria	Coast Saltbush
Austrostipa stipiodes	Prickly spear-grass
Banksia spp.	Banksia
Boronia spp.	Boronia
Brachyscome spp.	Cut-leaved daisy
Bursaria spinosa	Sweet Bursaria
Callistemon sp.	Bottle Brush
Calothamnus sp.	One-sided bottlebrush
Carpobrotus sp.	Pigface

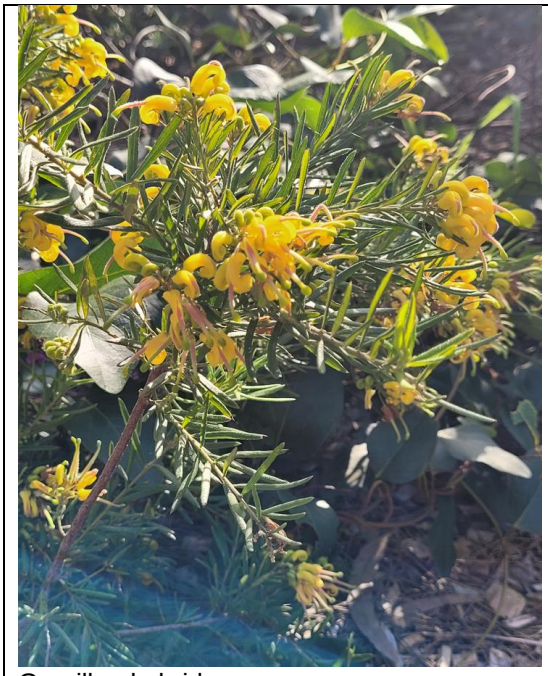
Chamelaucium spp.	Geraldon Wax
Einadia nutans	Nodding Saltbush
Gompholobium huegelii	Common Wedge-pea
Goodenia ovata	Hop Goodenia
Hardenbergia spp.	Purple coral pea
Hibbertia fasciculata var. prostrata	Bundled Guinea-flower
Indigofera australis	Austral Indigo
Juncus pallidus	Pale Rush
Stylidium graminifolium	Grass Trigger-plant
Wahlenbergia spp.	Native Bluebell
Xerochrysum	Everlasting Daisies
Eremophila spp.	Emu Bush
Lechenaultia spp.	Blue Lechenaultia
Lomandra spp.	Spiny-head Mat-rush
Pycnosorus spp.	Billy Buttons

Cut Leaved Daisy

Geralton Wax

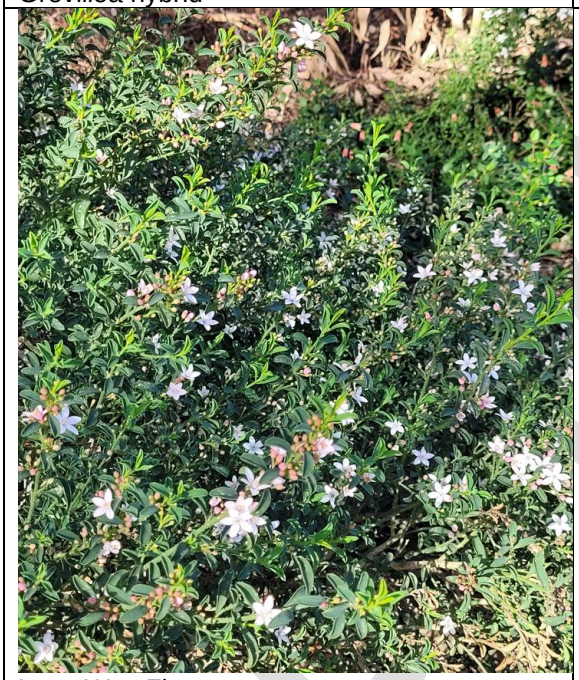
Grevillea

Native Fuscia



Grevillea hybrid

One sided bottlebrush



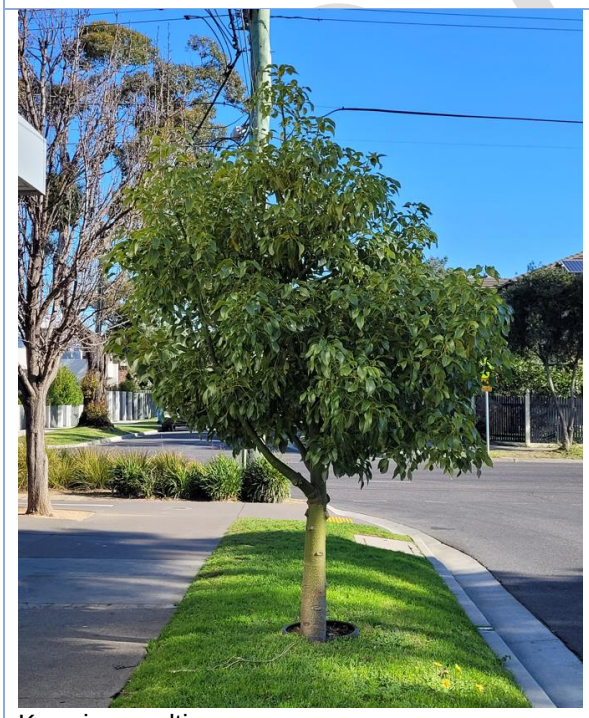
Long Wax Flower

Sasparilla vine

Botanical name	Common name
Native plants 1m - 5m	
Banksia spp.	Banksia
Brachychiton 'cultivars'	Kurrajong or Bottletree
Eucalyptus spp.	Gum trees
Corymbia cultivars	Flowering eucalyptus
Ficus microcarpa var hillii	Laurel fig
Ficus virens	White fig
Hakea spp.	Needle bush
Kunzea ericoides	White tea tree
Leptospermum spp.	Tea tree
Melaleuca spp.	Paperbark
Olearia axillaris	Coast daisy bush
Grevillea spp.	Grevillea
Tristaniopsis spp.	Kanooka or Water Gum
Melaleuca spp.	Tea tree
Correa spp.	Native Fuscia
Crowea spp.	Waxflower
Myoporum spp.	Boobialla
Olearia ramulosa	Twiggy Daisy-bush
Prostanthera spp.	Mintbush
Westringia spp.	Native Rosemary
Philotheca spp.	Long leafed wax flower
Buddleia spp.	Butterfly bush
Kunzea spp.	kunzea
Olearia	Daisy-bush
Dianella spp.	Blue flax lily
Aloygne spp.	Native Hibiscus

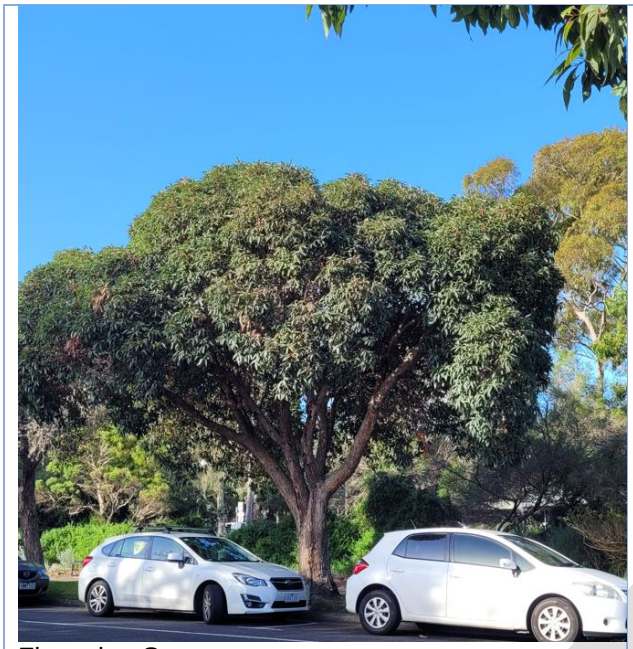
Botanical name	Common name
Native trees >5m	
Acacia spp.	Wattles
Acmena spp.	Lilipilli
Agathis robusta	Kauri
Agonis flexuosa	West Australian Weeping Peppermint
Allocasuarina spp.	She Oaks
Angophora spp.	Flowering Eucalypts
Araucaria spp.	Australian conifers
Banksia spp.	Banksia
Brachychiton spp.	Kurrajong or Bottletree
Callistemon spp.	Bottlebrush
Casuarina spp.	She Oaks
Corymbia spp.	Flowering Eucalypts
Cupaniopsis anacardioides	Tuckeroo

Elaeocarpus reticulatus	Blueberry Ash
Eucalyptus spp.	Gum trees
Ficus spp.	Fig trees
Flindersia australis	Australian teak
Geijera parviflora	Wilga
Grevillea hilliana	Grevillea tree
Grevillea robusta	Grevillea tree
Hymenosporum flavum	Native frangipani
Lophostemon confertus	Qld Brush Box
Lophostemon confertus Variegatus	Variegated Qld Brush Box
Macadamia integrifolia	Macadamia
Melaleuca spp.	Paperbark
Melia azedarach	White cedar
Melia azedarach 'Elite'	White cedar
Pittosporum spp.	Australian laurel
Podocarpus spp.	Plum pine
Stenocarpus sinuatus	Firewheel tree
Syncarpia glomulifera	Turpentine tree
Syzygium paniculatum	Brush cherry
Taxandria juniperina	Native cedar
Waterhousea floribunda	lilipilli
Wollemia noblilis	Wollemia pine



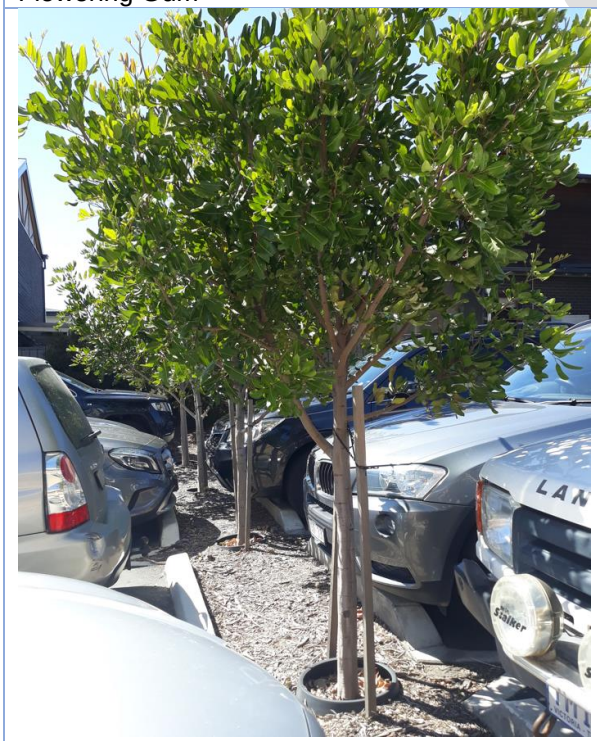
Kurrajong cultivar

Eucalyptus



Flowering Gum

Hakea



Tuckeroo

Lemon Scented Gums

Dwarf Eucalypt

Banksia

Exotic Plant List

Botanical Name	Common Name
Ground cover & Grasses <1m	
Abelia sp.	Abelia
Achillia spp.	Yarrow
Argyranthemu spp.	Daisies
Blechnum spp.	Silver Lady – dwarf tree fern
Bromeliads spp.	Bromeliad
Buxus sempervirens suffruticosa	Dutch box
Canna spp.	Canna Lily
Clivia spp.	Bush lily
Convolvulus spp.	Bindweed
Coprosma spp.	New Zealand laurel
Daphne spp.	Daphne
Escallonia spp.	Apple Blossom
Hebe spp.	Emerald Green Hebe
Hemerocallis spp.	Daylily
Liriope spp.	Lilyturf
Lithodora spp.	Purple gromwell
Nandina domestica	Heavenly Bamboo
Nuphar japonica	Japanese Pond Lily
Nymphoides indica	Water Snowflake
Orontium aquaticum	Golden Club
Phlebodium spp.	'Davana'
Plectranthus spp.	Little Spurflower
Rhaphiolepis spp.	Oriental Pearl
Sagittaria spp.	Arrowhead
Salvia spp.	Sage
Sedum spp.	Stonecrop
Senecio spp.	Groundsel

Red Hot Pokers

Box

Camellia

Daphne

Liriope

Bindweed

Salvia

Indian Hawthorn

Arrowhead

Botanical Name	Common Name
Midstory Canopy 1m – 5m	
Aeonium spp.	Saucer plant
Aloe spp.	Aloe Vera
Buxus spp.	Box
Camellia spp.	Camellia
Centranthus spp.	Valerian
Chamaemelum spp.	Camomile
Choisia spp.	Mexican Orange Blossum
Cistus spp.	Rock-rose
Cotinus spp.	Smoke bush
Cotula spp.	Buttonweed
Cotyledon spp.	Succulents
Dracaena spp.	Dragon trees
Echium spp.	Pride of Madeira
Euphorbia spp.	Spurge
Gardenia spp.	Gardenia
Helichrysum spp.	Everlasting
Hibiscus spp.	Hibiscus
Hypericum spp.	St John's wort
Juniperus spp.	Junipers
Lavandula spp.	Lavander
Myrtus communis	Common myrtle
Osteospermum spp.	African Daisies
Phlomis spp.	Jerusalem sage
Phormium tenax & cultivars	Flax
Phormium tenax & cultivars	New Zealand Flax
Pinus spp.	Pine trees
Rhododendron spp.	Azalea & Rhododendron varieties
Rosa spp.	Species Roses
Rosa x hybrida	Hybrid Tea Roses
Rosemary officinalis	Rosemary
Sedum spp.	Stonecrops

Stryletzia spp.	Bird of Paradise
Thymus spp.	Thyme

Botanical Name	**Common Name**
Canopy Tree >5m	
Abies spp.	Fir
Acca spp.	Feijoa
Acer spp.	Maple species and cultivars
Afrocarpus falcatus	Common Yellow
Arbutus unedo	Strawberry tree
Betula spp.	Birch
Catalpa spp.	Cigar tree
Cedrus spp.	Cedar
Celtis occidentalis	European nettle tree
Celtis occidentalis	Common Hackberry
Cercis siliquastrum	Judas Tree
Cupressus spp.	Cypress
Fraxinus spp.	European Ash
Ginkgo biloba	Ginkgo
Gleditsia triacanthos var.inermis Varieties	Honey locust
Jacaranda mimosifolia	Jacaranda
Juniperus spp.	Junipers
Lagerstroemia spp & cultivars	Crepe Myrtle
Liquidambar spp.	Sweet gum
Maclura pomifera	Osange Orange
Magnolia spp.	Magnolia
Malus spp.	Apple
Morus alba Pendula	Mulberry
Olea europaea	Olive
Phoenix canariensis	Canary Date Palm
Picea spp.	Spruces
Pinus spp.	Pine trees

Pistacia chinensis	Chinese pistacia
Platanus orientalis	Oriental Plane
Platanus X acerifolia	London Plane
Prunus spp.	Plum
Pyrus spp.	Pear
Quercus spp.	Oak
Sapium sebiferum	Chinese Tallow
Sophora japonica	Princeton Upright
Taxodium distichum	Bold Cypress
Tilia spp.	Basswood
Trachycarpus fortunei	Windmill Palm
Ulmus spp.	Elm
Washingtonia filifera	Dessert fan palm
Washingtonia robusta	Mexican Fan Palm
Zelkova serrata	Green Vase

 Maple	 Honey Locust	 Cedar
 Ash	 Maidenhair tree	 Osage orange
 Magnolia	 Pine	 Chinese pistachio

Glossary

Biodiversity: 'All components of the living world: the number and variety of plants, animals, and other living things (including fungi and micro-organisms) across our land, rivers, coast, and ocean. It includes the diversity of their genetic information, the habitats and ecosystems within which they live, and their connections with other life forms and the natural world'.[7]

Canopy cover is the layer formed by the branches and crowns of plants or trees. The cover can be continuous, as in primary forests, or discontinuous - with gaps as in an urban area. Canopy is defined in Living Melbourne as vegetation above three metres in height.[8]

Canopy tree: A tree which has, or at maturity is likely to have, sufficient height and canopy characteristics to make a positive contribution to local amenity, sense of place, micro climate and/or biodiversity. Minimum 8 x 4 metres.[9]

Climate change refers to a change in the state of the climate that can be identified (e.g., by using statistical tests) by changes in the mean and/or the variability of its properties and that persists for an extended period, typically decades or longer.[10]

Climate change adaptation is the process of adjustment to actual or expected climate and its effects.[11]

Climate change mitigation is the human intervention to reduce the sources or enhance the sinks of greenhouse gases.[11]

Climate Emergency refers to the catastrophic changes to the climate brought about by human activity that poses a dangerous threat to all life on the planet.[11]

Environmentally Sustainable Development refers to development that is designed, constructed, and managed to optimise climate resilience, energy efficiency, integrated water management, indoor environment quality, the circular economy, low carbon transport and urban ecology.[12]

General Residential Zone (GRZ) is applied to land in areas where growth and housing diversity is anticipated. It is expected that the type of housing provided will evolve over time to provide more diverse forms of housing, but not at the expense of existing open garden character.[13]

Greenways are a form of landscape planning. They are linear open space corridors in the built or natural environment, which preserve biodiversity or other aspects of a sustainable environment, and generally engage the community in recreational use.[14]

Habitat: All the physical and biological things that collectively make up the place where a plant or animal lives.[15]

Habitat Corridor: A habitat corridor is a linear two-dimensional landscape element that differs from the surrounding vegetation, in both vegetation structure and form, and connects two or more patches, of otherwise isolated, habitat that have been connected in historical time, this is meant to function as a conduit for both plants and animals.[16]

Heat Vulnerability Index: The heat vulnerability index (HVI) is represented by a scale of 1 to 5 based on quintiles, with 1 representing low exposure, low sensitivity, or high adaptive capacity and 5 representing high exposure, high sensitivity or low adaptive capacity. We integrated indicators of heat vulnerability to calculate a Heat Vulnerability Index (HVI) at SA1 level. The index consists of three component layers: heat exposure, sensitivity to heat, and adaptive capability. Integration was accomplished by summing the scores from the three vulnerability components, dividing the SA1s into quintiles, and attributing SA1s with a Heat Vulnerability Rating scaled from 1 to 5.[17]

Neighbourhood Residential Zone (NRZ) is applied to land that has been identified as having specific neighbourhood, heritage, environmental or landscape character values that distinguish the land from other parts of the municipality or surrounding area.[18]

Permeability: The readiness with which a surface, whether man-made (such as a paved road) or natural (such as soil or rock) allows water, air or plant roots to penetrate or pass through.[19]

Residential Growth Zone (RGZ) is considered a substantial change area where medium density housing growth and diversity of housing types is encouraged for example town houses and apartments around activity centres and close to train stations.[20]

Resilience: The capacity of individuals, institutions, businesses and systems within a city to adapt, survive and thrive no matter what kind of chronic stresses and acute shocks they experience.[11]

SEIFA: Socio-Economic Indexes for Areas (SEIFA) measures the relative level of socio-economic disadvantage and/or advantage based on a range of Census characteristics.[21]

Senescence is the process by which cells irreversibly stop dividing and enter a state of permanent growth arrest without undergoing cell death.[22]

Significant Landscape Overlay (SLO): The Significant Landscape Overlay (SLO) is a planning overlay and tool for protecting and managing significant landscapes. Its purpose is to identify significant landscapes, and conserve and enhance their character. The SLO can require a permit to construct a building or construct or carry out works, construct a fence, and remove, destroy or lop any vegetation.[23]

Significant Tree: Some trees, through age, size, and rarity of planting or association with historical events achieve a higher level of importance on private or public land. Identifies the following the categories used to define significant trees as scientific, social, historic, and aesthetic.[24]

Tree Canopy: The uppermost trees or branches of trees in a forest, forming an almost continuous layer of foliage. The topmost layer of bioactivity in a forest setting.[4]

Urban Forest encompasses all of the Trees, Shrubs and Grasslands – and the Soil and Water that support them. An Urban Forest incorporates vegetation in streets, parks, gardens, plazas, campuses, river and creek embankments, coastal foreshores, wetlands, railway corridors, community gardens, green walls, balconies, and roofs.[4]

Urban Heat Island Effect: The phenomenon of dense urban areas having significantly warmer air and land surface temperatures than surrounding areas.[4]

Useful Life Expectancy (ULE): Assessment of useful life expectancy provides an indication of health and tree appropriateness and involves an estimate of how long a tree is likely to remain in the landscape based on species, stage of life (cycle), health, amenity, environmental services contribution, conflicts with adjacent infrastructure and risk to the community. It is not a measure of the biological life of the tree within the natural range of the species. It is more a measure of the health status and the tree's positive contribution to the urban landscape.[2]

Vegetation Protection Overlay (VPO): The VPO focuses on the protection of significant vegetation, including native and introduced vegetation in urban environments. The overlay can be applied to individual trees, groups of trees or areas of significant vegetation. It requires a landowner to obtain a permit to remove, destroy or lop any vegetation specified in a schedule to the overlay subject to a list of exemptions. Some of those exemptions apply to particular types of vegetation and others apply to specific situations, for example, to clear vegetation from electricity lines and to ensure emergency access.[25]

Vulnerability: Exposure to contingencies and stress, and the difficulty in coping with them. This can apply to ecosystems, trees, people, and places.[26]

Water Sensitive Urban Design (WSUD) is a more sustainable approach to urban planning and design to make use of stormwater and reduce the harm it causes to our natural waterways.[27]
